This book integrates the microeconomics of trade with international finance and open economy macroeconomics. The emphasis throughout is on international competition and the limits of trade policy. Economics began

with a debate over tariffs. Domestic industries lobby for protection against foreign competitors or export subsidies. Government policy makers dole favors in return for cash and votes. Governments negotiate free trade agreements but disregard them when possible with tariffs, export subsidies, and other policies to influence foreign trade and investment. The forces of international competition, however, eventually overwhelm government policy. This text presents the critical issues of international trade and finance. Trade theory includes partial equilibrium market analysis, neoclassical trade models, constant cost production, factor proportions production, and models of industrial organization. The text integrates concepts from international finance and the basic models of open economy macroeconomics. The presentation uses graphs with numerical examples making the theory easier for students, especially when combined with more general classroom presentation. The text does not assume previous courses in intermediate economics or calculus but develops the theory with simple tools. Numerous questions give students confidence to use the theoretical models and concepts. Over 250 boxed examples illustrate the theory, many with visually descriptive charts and plots. The text is concise in its presentation style. Students enjoy its clear straightforward style and instructors notice the difference on exams.

Under the former theory, the topics tackled are the transfer of money between countries or foreign exchange operations; the mechanism of international payments; and the actual determination of exchange rates. The book describes the balance of payments and the balance of payment adjustments and its monetary, fiscal, and exchange rate policies. The determination of the quantity and composition of international reserves and the causes and consequences of trade are also considered.
