This new book, from the editor of the highly successful Pharmaceutical Analysis, sets out to define the area of pharmaceutical chemistry as distinct from medicinal chemistry. It focuses less on prototypes of drugs that perhaps never came to market and more on the drugs currently in use. The emphasis in the book is on the physicochemical properties of drug molecules and, in so far as they are known, the way that these properties govern the interaction of the drug with its target. Important physicochemical properties include pKa and partition coefficient and the properties of the structural elements within the drug which provide interactions with the target via a range of intermolecular forces. The last fifteen years has seen a great advance in the knowledge of protein structures and a strong emphasis is given to the interaction of drugs with proteins which shape the majority of drug mechanisms. Features: Focus on intramolecular actions Mechanisms of action richly illustrated Self-assessment included Comprehensive chapters on vitamins and biotechnological products

### **Challenging Learning Through Dialogue (International Edition) Corwin Press**

Co-published with AIEA International higher education has evolved, in some respects dramatically, in the decade since publication of the first edition of this handbook. The new issues, trends, practices and priorities of research that evolved over this time have in some instances been transformed by one of the most dynamic and tumultuous periods in the history of international higher education, brought on by the pandemic, a re-emergence of nationalism, and the recognition of the power imbalances between the developed economies and the global south, and racial inequities within and across borders. This new edition addresses the myriad changes across all aspects of international education, each chapter addressing to the extent possible the reality of the present in which they were written and offering some insights for the future. While updating a number of chapters from the first edition, it also includes a preponderance of new chapters written by contributors representing wider and more diverse backgrounds. In keeping with the first edition, the overall message is that the internationalization of higher education has a vital role to play in a world that is more interconnected than ever before. Recognizing changing economic, geopolitical, climatic, and public health issues, as well as the importance of international and cross-cultural collaboration to address global problems, this handbook offers a comprehensive range of models, data and ideas to stimulate new directions in the conception and practice of international education. This edition reflects today's concerns around inclusion, diversity and equity, and how international education is being changed by issues such as decolonization, the focus on learning outcomes, the impact of digital tools to enhance access and learning and collaboration such a virtual exchange, competition for resources, risk, new patterns of mobility, and new models such as joint programs and qualifications. As with the first edition, the chapters often intentionally pair scholars and practitioners from different parts of the world, and include text boxes that highlight concrete institutional, national, or regional experiences, providing diverse voices and perspectives from around the world. This comprehensive new edition provides ideas, concepts, theories and practical ideas from around the world for those seeking to enhance the quality of the three core functions of higher education: teaching, research and service to society. It constitutes an essential resource for everyone involved in the delivery of international education and in determining its future direction. Summary of Contents Maintaining a similar structure of the first edition, this revised Handbook is comprised of four sections. The first section includes five chapters that address national, regional and international frameworks and contexts. The second addresses key aspects of internationalization at the strategy level, covering leadership, institutional strategies, outcomes assessment, resources and financing, risk management, and institutional linkages and partnerships. The third describes core functions of internationalization, addressing intercultural competence development, the internationalization of the curriculum, teaching and learning, virtual exchange, international perspectives on the work of student affairs professionals, student engagement, engaging staff and faculty, the internationalization of research and finally, and a chapter on serving communities.

Dialogue is one of the best vehicles for learning how to think, how to be reasonable, how to make moral decisions and how to understand another person's point of view. It is supremely flexible, instructional, collaborative, and rigorous. At its very best, dialogue is one of the best ways for participants to learn good habits of thinking. There is also substantial evidence that teachers currently talk too much in classes, often only waiting .8 seconds after asking a question before jumping in with the answer if a student doesn't quickly volunteer. This book guides teachers through the different types of dialogue and how they can be used to enhance students' learning.
