"Tomorrow's Lawyers predicts that we are at the beginning of a period of fundamental transformation in law: a time in which we will see greater change than we have seen in the past two centuries. Where the future of the legal service will be a world of internet-based global businesses, online document production, commoditized service, legal process outsourcing, and web based simulation practice. Legal markets will be liberalized, with new jobs for lawyers and new employers too. This book is a definitive guide to this future - for young and aspiring lawyers, and for all who want to modernize our legal and justice systems. It introduces the new legal landscape and offers practical guidance for those who intend to build careers and businesses in law. ... This new edition has been fully updated to include an introduction to online dispute resolution, Susskind's views on the debates surrounding artificial intelligence and its role in the legal world, a new analysis of new jobs available for lawyers, and a retrospective evaluation of The Future of Law, Susskind's prediction published in 1996 about the future of legal services." -- Publisher's website.

### **Encyclopedia of Information Science and Technology, Third Edition** IGI Publishing

Intelligent Decision Technologies (IDT) seeks an interchange of research on intelligent systems and intelligent technologies which enhance or improve decision making in industry, government and academia. The focus is interdisciplinary in nature, and includes research on all aspects of intelligent decision technologies, from fundamental development to the applied system. This volume represents leading research from the Third KES International Symposium on Intelligent Decision Technologies (KES IDT ' 11), hosted and organized by the University of Piraeus, Greece, in conjunction with KES International. The symposium was concerned with theory, design, development, implementation, testing and evaluation of intelligent decision systems. Topics include decision making theory, intelligent agents, fuzzy logic, multi-agent systems, Bayesian networks, optimization, artificial neural networks, genetic algorithms, expert systems, decision support systems, geographic

information systems, case-based reasoning, time series, knowledge management systems, rough sets, spatial decision analysis, and multi-criteria decision analysis. These technologies have the potential to revolutionize decision making in many areas of management, healthcare, international business, finance, accounting, marketing, military applications, ecommerce, network management, crisis response, building design, information retrieval, and disaster recovery for a better future.
