Knowledge Management in Modern Organizations IGI Global

The International Journal of Knowledge, Culture and Change Management examines the nature of the organization in all its forms and manifestations: businesses, from micro-enterprises to multinational corporations; institutions of formal learning, from pre-schools to universities; public sector agencies; and non-government and community sector organizations. Its concern also extends beyond the boundaries of organizations to consider the dynamics of supply chains, organizational alliances, networks, communities of practice and capacity building. Across all of these contexts, a pragmatic focus persists-to examine the 'organization' and 'management' of groups of people collaborating to productive ends, and to analyze what makes for success and sustainability. The focus of the journal is on those intangible drivers which determine not only the livability of organizations for insiders, and their credibility and attraction to outsiders; but also their tangible results in the form of efficiency, effectiveness and productivity. The intangibles of knowledge, culture and change management do not appear on balance sheets, but ultimately do have an enormous impact on 'bottom lines'. The journal attempts to address dynamics of knowledge, culture and change as they manifest themselves in organizations. The perspectives range from big picture analyses to detailed case studies which speak to the tangible value of organizational intangibles. They traverse a broad terrain, from theory and analysis to practical strategies. The journal is relevant for academics in the fields of management, social sciences and education/training, research students, knowledge managers, trainers, industry consultants and knowledge management and change practitioners - anyone with an interest in, and concern for, cultural change in organizations. The International Journal of Knowledge, Culture and Change Management is peer-reviewed, supported by rigorous processes of criterion-referenced article ranking and qualitative commentary, ensuring that only intellectual work of the greatest substance and highest significance

is published.

Social Knowledge: Using Social Media to Know What You Know

Springer Science & Business Media

This book presents the current state of knowledge concerning developments in organisational behaviour and human capital management in the new millennium. It features an in-depth study among managerial staff in the manufacturing sector in Malaysia to reflect employee perceptions of organisational justice, organisational citizenship behaviour, job satisfaction and manager-employee exchanges. Specifically, it seeks to establish the relationships between these constructs to better manage human capital. With globalisation and the increased career mobility of young talents, organisational citizenship behaviour is of paramount importance in order to retain these workers. The study's greatest contribution is its identification of key indicators that influence organisational citizenship behaviour. Knowing which type of organisational justice is salient for each construct allows the management to proactively improve conditions at the workplace. In essence, this book is intended to draw attention to those aspects of managing human capital that ought to receive the most attention, but are often overlooked in practice. In light of ongoing global challenges, it seeks to improve governance at the workplace. It offers a valuable resource for researchers and practitioners alike, as well as graduate students writing their dissertations.

Transnational learning has become a buzz phrase in European policy-making and in multi-national business. Learning from the experiences of others is an idea that captivates practitioners and academics alike due to its simplicity and availability in a world that is increasingly characterised by cross-border and global connections. European regions in particular offer a diverse range of solutions to often shared challenges. This provides a knowledge base for other regions to draw on, through regional success stories, publications of 'best practice' and EU cooperation programmes. This book explores 'transnational learning and knowledge transfer' in co-operation programmes and projects. It argues that a deeper understanding of learning needs to be central to the implementation of programmes and projects in order to successfully meet their desired outcomes and goals. By characterising some of the most important preconditions of transnational learning and introducing a process perspective to learning and transfer, this book identifies barriers to learning and knowledge transfer and contributes to a stronger conceptualisation of the topic. In doing so, it opens up the 'black-box' of transnational learning and knowledge development, providing a better understanding of its inner mechanisms. It also provides practical recommendations for policy makers and practitioners involved both at the programme and project level of transnational EU initiatives. This book will be of interest to students, researchers, and policy makers alike working in geography, political studies, legal studies and European studies.
