ICICKM2008- 5th International Conference on Intellectual Capital, Knowledge Management and Organisational Learning IGI Global Transnational learning has become a buzz phrase in European policy-making and in multi-national business. Learning from the experiences of others is an idea that captivates practitioners and academics alike due to its simplicity and availability in a world that is increasingly characterised by cross-border and global connections. European

regions in particular offer a diverse range of solutions to often shared challenges. This provides a knowledge base for other regions to draw on, through regional success stories, publications of 'best practice' and EU cooperation programmes. This books explores 'transnational learning and knowledge transfer' in co-operation programmes and projects. It argues that a deeper understanding of learning needs to be central to the implementation of programmes and projects in order to successfully meet their desired outcomes and goals. By characterising some of the most important preconditions of transnational learning and introducing a process perspective to learning and transfer,

this book identifies barriers to learning and knowledge transfer and contributes to a stronger conceptualisation of the topic. In doing so, it opens up the 'black-box' of transnational learning and knowledge development, providing a better understanding of its inner mechanisms. It also provides practical recommendations for policy makers and practitioners involved both at the programme and project level of transnational EU initiatives. This book will be of interest to students, researchers, and policy makers alike working in geography, political studies, legal studies and European studies.

future research perspectives on intercultural knowledge sharing and offers a model for the growth of organizational knowledge in the digital age. The author puts forward multidisciplinary and multi-paradigmatic approaches to offer an updated view on the best practices towards international management. With insights on the opportunities and limitations of the use of digital and social media to facilitate intercultural knowledge sharing in business, the book explores the evolution of research on the topic, taking into account the consequence of “glocalization” as well as technological innovation and the evolution of organizational strategies and structures. Intercultural Knowledge Sharing in MNCs will be of use to scholars of management and organizational studies, as well as managers of international businesses interested in knowledge sharing, as it delivers an invaluable model which aims to conciliate diversity and inclusion, global and local knowledge, technological innovation and humanism.

The world is moving into a new era of the knowledge economy. In the past decade, the significance of developing knowledge has

grown to a level where it is now dominating other socio-economic factors. Systems Approaches to Knowledge Management, Transfer, and Resource Development provides a new view of knowledge management through the lens of systems approach, which looks at each part of the knowledge management system as a section of the full overview. This cutting-edge resource will be essential for academicians, scientists, practitioners, and industry professionals as all of these individuals work toward a new understanding of knowledge and information management practices in the 21st century.

Cultural and Technological Influences on Global Business Academic Conferences Limited This book analyzes dynamic relationships among the disciplines that have contributed to the development of knowledge management. It focuses on establishing relationships between knowledge management and other disciplines such as information management, organizational learning, innovation management, and strategic management. It debates the origin and development of knowledge management, thus providing a clear and conceptual understanding of the field. This, in turn, will help readers adopt better approaches to solve knowledge management problems.

This textbook on knowledge management draws on the authors’ more than twenty years of research, teaching and consulting experience. The first edition of this book brought together European, Asian and American perspectives on knowledge-based value creation; this second edition features substantial updates to all chapters, reflecting the implications of the digital transformation on knowledge work and knowledge management. It also addresses three new topics: the impact of knowledge management practices on performance; knowledge management in the public sector; and an introduction to ISO 9001:2015 as an implementation framework. The book is intended not only for academic education but also as an essential guide for managers, consultants, trainers, coaches, and all those engaged in business, public administration or

\*\*The International Journal of Knowledge, Culture and Change Management examines the nature of the organisation in all its forms and manifestations: businesses, from micro-enterprises to multinational corporations; institutions of formal learning, from pre-schools to universities; public sector agencies; and non-government and community sector organisations. Its concern also extends beyond the boundaries of organisations to consider the dynamics of supply chains, organisational alliances, networks, communities of practice and capacity building. Across all of these contexts, a pragmatic focus persists-to examine the 'organisation' and 'management' of groups of people collaborating to productive ends, and to analyse what makes for success and sustainability. The focus of the journal is on those intangible drivers which determine not only the livability of organisations for insiders, and their credibility and attraction to outsiders; but also their tangible results in the form of efficiency, effectiveness and productivity. The

intangibles of knowledge, culture and change management do not appear on balance sheets, but ultimately do have an enormous impact on 'bottom lines'. The journal attempts to address dynamics of knowledge, culture and change as they manifest themselves in organisations. The perspectives range from big picture analyses to detailed case studies which speak to the tangible value of organisational intangibles. They traverse a broad terrain, from theory and analysis to practical strategies. The journal is relevant for academics in the fields of management, social sciences and education/training, research students, knowledge managers, trainers, industry consultants and knowledge management and change practitioners - anyone with an interest in, and concern for, cultural change in organisations. The International Journal of Knowledge, Culture and Change Management is peer-reviewed, supported by rigorous processes of criterion-referenced article ranking and qualitative commentary, ensuring that only intellectual work of the greatest substance and highest significance is published.

This book presents the current state of knowledge concerning developments in organisational behaviour and human capital management in the new millennium. It features an in-depth study among managerial staff in the manufacturing sector in Malaysia to reflect employee perceptions of organisational justice, organisational citizenship behaviour, job satisfaction and manager-employee exchanges. Specifically, it seeks to establish the relationships between these constructs to better manage human capital. With globalisation and the increased career mobility of young talents, organisational citizenship behaviour is of paramount importance in order to retain these workers. The study 's greatest contribution is its identification of key indicators that influence organisational citizenship behaviour. Knowing which type of organisational justice is salient for each construct

allows the management to proactively improve conditions at the workplace. In essence, this book is intended to draw attention to those aspects of managing human capital that ought to receive the most attention, but are often overlooked in practice. In light of ongoing global challenges, it seeks to improve governance at the workplace. It offers a valuable resource for researchers and practitioners alike, as well as graduate students writing their dissertations.

complex, and uncertain. New management, marketing, and accounting tools and strategies are needed to improve a company's sustainability in the current collaborative economy. Strategies for Business Sustainability in a Collaborative Economy is a collection of innovative research that focuses on organizational tools and practices that may foster a company's success in the new economic context, which is defined by the faster pace of technological progress and the entrance of Generation Z on the labor market. Thus, it analyzes how Generation Z transforms human resources policies and practices and how they change the concept of sustainability through their needs and expectations. Highlighting a wide range of topics including resource management, knowledge-based firms, and business models, this publication examines how business

models evolve given the success recorded by newer companies. This book is ideally designed for entrepreneurs, executives, managers, economists, academicians, researchers, and students.

Computers are supposed to be smart, yet they frustrate both ordinary users and computer technologists. Why are people frustrated by smart machines? Computers don't fit people. People think in terms of comparisons, stories, and analogies, and seek feedback, whereas computers are based on a fundamental design that does not fit with analogical and feedback thinking. They impose a binary, an all-or-nothing, approach to

everything. Moreover, the social world and institutions that have developed around computer technology hide and reinforce the lack of alignment between computers and people. This book suggests a solution: we do not have to accept the way things are now and work around the bad social and technical design of computers. Rather, it proposes a diverse, distributed, critical discussion of how to design and build both computer technology and its social institutions.
