Industrial State model which has dominated the Twentieth century and that new models, better attuned to the New Economy of the later Twentieth and early Twenty-first centuries are now needed. The book points to careers as actions rather than structures, as a means of learning rather than means of earning, and as	boundaryless entities rather than constrained ones. It also points to the return of the career as a key concept in social analysis, but shows that in the light of new phenomena, the `career? as we traditionally know it will never be the same again. This innovative and accessible book is based on work for which Michael Arthur, Kerr Inkson and	Judith Pringle won the Academy of Management prize for best section paper, which forms the core of this book.
