"The ninth edition of International Trauma Life Support for Emergency Care Providers has been reorganized to reflect a more functional approach to the assessment and management of the trauma patient in the pre-hospital environment"--

### Posttraumatic Growth HMH

Trauma is a leading cause of death and disability around the world, and the leading cause of death in those aged under forty-five years. Conditions such as airway obstruction, hemorrhage, pneumothorax, tamponade, bowel rupture, vascular injury, and pelvic fracture can cause death if not appropriately diagnosed and managed. This essential book provides emergency physicians with an easy-to-use reference and source for traumatic injury evaluation and management in the Emergency Department. It covers approaches to common, life-threatening, and traumatic diseases in the Emergency Department, for use on shift and as a reference for further learning. Each chapter includes a succinct overview of common traumatic injuries, with evaluation and management pearls and pitfalls. Highly illustrated with images from one of the busiest trauma centers in the US, and featuring expert contributions from a diverse set of attending physicians, this is an essential text for all emergency medicine practitioners.

New York Times Bestseller COVID-19 is speeding up history, but how? What is the shape of the world to come? Lenin once said, "There are decades when nothing happens and weeks when decades happen." This is one of those times when history has sped up. CNN host and best-selling author Fareed Zakaria helps readers to understand the nature of a post-pandemic world: the political, social, technological, and economic consequences that may take years to unfold. Written in the form of ten "lessons," covering topics from natural and biological risks to the rise of "digital life" to an emerging bipolar world order, Zakaria helps readers to begin thinking beyond the immediate effects of COVID-19. Ten Lessons for a Post-Pandemic World speaks to past, present, and future, and, while urgent and timely, is sure to become an enduring reflection on life in the early twenty-first century.

**Guidelines for Trauma Quality Improvement Programmes** John Wiley & Sons  
Hailed by The New York Times as "a compelling dystopian look at paranoia from one of the most unique and perceptive writers of our time," this brief, captivating novel offers a cautionary tale. The story unfolds within a society in which all traces of individualism have been eliminated from every aspect of life – use of the word "I" is a capital offense. The hero, a rebel who discovers that man's greatest moral duty is the pursuit of his own happiness, embodies the values the author embraced in her personal philosophy of objectivism: reason, ethics, volition, and individualism. Anthem anticipates the themes Ayn Rand explored in her later masterpieces, The Fountainhead and Atlas Shrugged. Publisher's Weekly acclaimed it as "a diamond in the rough, often dwarfed by the superstar company it keeps with the author's more popular work, but every bit as gripping, daring, and powerful." Anthem is a dystopian fiction novella by Ayn Rand, written in 1937 and first published in 1938 in England. It takes place at some unspecified future date when mankind has entered another dark age characterized by irrationality, collectivism, and socialistic thinking and economics. Technological advancement is now carefully planned (when it is allowed to occur at all) and the concept of individuality has been eliminated.

In order to promote greater implementation of effective, affordable and sustainable trauma systems globally, the World Health Organization and the International Association for Trauma Surgery and Intensive Care have worked collaboratively to produce these guidelines on trauma quality improvement. The response to the growing problem of injury needs to include the improvement of care of the injured. Quality improvement (QI) programs offer an affordable and sustainable means to implement such improvements. These programs enable health care institutions to better monitor trauma care services, better detect problems in care, and more effectively enact and evaluate corrective measures targeted at these problems. The goal of this publication is to give guidance on ways in which health care institutions globally can implement QI programs oriented to strengthening care of the injured. This guidance is intended to be universally applicable to all countries, no matter what their economic level. These guidelines provide basic definitions and an overview of the field of QI, so that those not familiar with this field will have a working knowledge of it. Evidence of the benefit of QI in general and trauma QI in particular is then laid out. The main part of the publication reviews the most common methods of trauma QI, written in a how-do-to fashion. This covers a wide range of techniques. The first two of these are especially emphasized as ways in which to strengthen trauma QI in the setting of low-income and middle-income countries.

Clinical Pathways in Emergency Medicine Lippincott Williams & Wilkins

THE MILLION COPY INTERNATIONAL BESTSELLER Drawn from 3,000 years of the history of power, this is the definitive guide to help readers achieve for themselves what Queen Elizabeth I, Henry Kissinger, Louis XIV and Machiavelli learnt the hard way. Law 1: Never outshine the master Law 2: Never put too much trust in friends; learn how to use enemies Law 3: Conceal your intentions Law 4: Always say less than necessary. The text is bold and elegant, laid out in black and red throughout and replete with fables and unique word sculptures. The 48 laws are illustrated through the tactics, triumphs and failures of great figures from the past who have wielded - or been victimised by - power.

\_\_\_\_\_ (From the Playboy interview with Jay-Z, April 2003) PLAYBOY: Rap careers are usually over fast: one or two hits, then styles change and a new guy comes along. Why have you endured while other rappers haven't? JAY-Z: I would say that it's from still being able to relate to people. It's natural to lose yourself when you have success, to start surrounding yourself with fake people. In The 48 Laws of Power, it says the worst thing you can do is build a fortress around yourself. I still got the people who grew up with me, my cousin and my childhood friends. This guy right here (gestures to the studio manager), he's my friend, and he told me that one of my records, Volume Three, was wack.

People set higher standards for me, and I love it.

A New York Times Notable Book: A psychologist’s “gripping and thought-provoking” look at how and why our brains sometimes fail us (Steven Pinker, author of *How the Mind Works*). In this intriguing study, Harvard psychologist Daniel L. Schacter explores the memory miscues that occur in everyday life, placing them into seven categories: absent-mindedness, transience, blocking, misattribution, suggestibility, bias, and persistence. Illustrating these concepts with vivid examples—case studies, literary excerpts, experimental evidence, and accounts of highly visible news events such as the O. J. Simpson verdict, Bill Clinton’s grand jury testimony, and the search for the Oklahoma City bomber—he also delves into striking new scientific research, giving us a glimpse of the fascinating neurology of memory and offering “insight into common malfunctions of the mind” (USA Today). “Though memory failure can amount to little more than a mild annoyance, the consequences of misattribution in eyewitness testimony can be devastating, as can the consequences of suggestibility among pre-school children and among adults with ‘false memory syndrome’ . . . Drawing upon recent neuroimaging research that allows a glimpse of the brain as it learns and remembers, Schacter guides his readers on a fascinating journey of the human mind.” —Library Journal  
“Clear, entertaining and provocative . . . Encourages a new appreciation of the complexity and fragility of memory.” —The Seattle Times  
“Should be required reading for police, lawyers, psychologists, and anyone else who wants to understand how memory can go terribly wrong.” —The Atlanta Journal-Constitution  
“A fascinating journey through paths of memory, its open avenues and blind alleys . . . Lucid, engaging, and enjoyable.” —Jerome Groopman, MD  
“Compelling in its science and its probing examination of everyday life, *The Seven Sins of Memory* is also a delightful book, lively and clear.” —Chicago Tribune

Her name was Henrietta Lacks, but scientists know her as HeLa. She was a poor Southern tobacco farmer who worked the same land as her slave ancestors, yet her cells—taken without her knowledge—became one of the most important tools in medicine: The first “immortal” human cells grown in culture, which are still alive today, though she has been dead for more than sixty years. HeLa cells were vital for developing the polio vaccine; uncovered secrets of cancer, viruses, and the atom bomb’s effects; helped lead to important advances like in vitro fertilization, cloning, and gene mapping; and have been bought and sold by the billions. Yet Henrietta Lacks remains virtually unknown, buried in an unmarked grave. Henrietta’s family did not learn of her “immortality” until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is inextricably connected to the dark history of experimentation on African Americans, the birth of bioethics, and

the legal battles over whether we control the stuff we are made of. Over the decade it took to uncover this story, Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta’s daughter Deborah. Deborah was consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to medicine, why couldn’t her children afford health insurance? Intimate in feeling, astonishing in scope, and impossible to put down, *The Immortal Life of Henrietta Lacks* captures the beauty and drama of scientific discovery, as well as its human consequences.

Boarding School Syndrome is an analysis of the trauma of the 'privileged' child sent to boarding school at a young age. Innovative and challenging, Joy Schaverien offers a psychological analysis of the long-established British and colonial preparatory and public boarding school tradition. Richly illustrated with pictures and the narratives of adult ex-boarders in psychotherapy, the book demonstrates how some forms of enduring distress in adult life may be traced back to the early losses of home and family. Developed from clinical research and informed by attachment and child development theories 'Boarding School Syndrome' is a new term that offers a theoretical framework on which the psychotherapeutic treatment of ex-boarders may build. Divided into four parts, History: In the Name of Privilege; Exile and Healing; Broken Attachments: A Hidden Trauma, and The Boarding School Body, the book includes vivid case studies of ex-boarders in psychotherapy. Their accounts reveal details of the suffering endured: loss, bereavement and captivity are sometimes compounded by physical, sexual and psychological abuse. Here, Joy Schaverien shows how many boarders adopt unconscious coping strategies including dissociative amnesia resulting in a psychological split between the 'home self' and the 'boarding school self'. This pattern may continue into adult life, causing difficulties in intimate relationships, generalized depression and separation anxiety amongst other forms of psychological distress. Boarding School Syndrome demonstrates how boarding school may damage those it is meant to be a reward and discusses the wider implications of this tradition. It will be essential reading for psychoanalysts, Jungian analysts, psychotherapists, art psychotherapists, counsellors and others interested in the psychological, cultural and international legacy of this tradition including ex-boarders and their partners.
