The Scott, Foresman Handbook for Writers, 6e continues its tradition of innovation with ground-breaking coverage of grading, service learning, document design, and research. Already the most imitated book in its field, SFH/6e becomes the first handbook to offer a full chapter on "Evaluating Writing," covering both traditional and portfolio systems of grading. The new chapter answers many of the questions about grading principles, criteria and procedures that instructors face every term. There's more, too, in this edition about the kinds of writing more and more college writers are doing in their professional and civic lives or in service-learning courses. Already a leader in technology, SFH now expands its first-ever treatment of document design into a fully illustrated section that explains document design as a

process like writing itself. There's a thorough new chapter with full coverage of Writing for the Web and a portfolio chapter of four-color model documents. Coverage of research continues to set the standard for college projects with new material on designing research projects, evaluating sources, and working with online materials. A series of "E-tips" here and throughout the volume directs writers to helpful online materials to enhance their thinking and research. But the edition has not neglected more traditional elements of writing. Every chapter has been reworked to enhance clarity and to polish the notably friendly style of SFH. No handbook addresses writers more cordially or helpfully. A new, cleaner design makes all materials more accessible and frequent photos and images make the entire package more student friendly. Now updated to include the latest information on APA documentation style.

Microcomputer-based labs, the use of real-time data capture and display in teaching, give the learner new ways to explore and understand the world. As this book shows, the international effort over a quarter-century to develop and understand microcomputer-based labs (MBL) has resulted in a rich array of innovative implementations and some convincing evidence for the value of computers for learning. The book is a sampler of MBL work by an outstanding international group of scientists and educators, based on papers they presented at a seminar held as part of the NATO Special Programme on Advanced Educational Technology. The story they tell of the development of

MBL offers valuable policy lessons on how to promote educational innovation. The book will be of interest to a wide range of educators and to policy makers.

Social Statistics for a Diverse Society World Scientific

By the end of his long life, B. F. Skinner (1904-1990) had become one of the most influential and best known of psychologists (Gilgen, 1982; Heyduke & Fenigstein, 1984). An important feature of the approach to the study of behavior that he championed, behavior analysis, is the intensive study of individual subjects over time. This approach, which is characterized by the use of within-subject experimental designs, repeated and direct measures of behavior, and graphic analysis of data, stands in marked contrast to the research methods favored by many nonbehavioral psychologists. Skinner discussed the advantages of his approach in a number of books (e.g., Skinner, 1938, 1953, 1979), but never devoted a book to methodology. Sidman (1960) and Johnson and Pennypack (1993b) did devote books to behavior analytic research methodology. These books are of exceptionally high quality and should be read carefully by anyone interested in behavior analysis. They are sophisticated, however, and are not easy reads for most neophyte behaviorists. Introductory-level books devoted entirely to methods of applied behavior analysis (e.g., Kazdin, 1982; Barlow & Hersen, 1984) are easier to understand, but somewhat limited in coverage.

Missing the Meaning investigates recent evidence that school text materials are more problematic than previously imagined. Difficulties with language,

illustrations, design and cultural mismatch are highlighted, and ways in which young students 'read' books and electronic materials in classrooms are compared through contributions from researchers across five continents. The book suggests new ways to develop and use text so that the materials are better matched to the diverse needs of teachers and students. The implications of this collection are wide, applying not only to teachers, but to teacher educators, educational publishers, software developers and policy makers.
