Tarpley V. Jeffers Dorrance Publishing
First published in 1982. It is not difficult to understand why interest in psychological aspects of energy production, consumption, and conservation has increased during the past decade. The stresses of living or working near power plants, the problems inherent in reducing fuel consumption, and the many applications of behavioral science to these issues have all received attention of late. This volume, the third in a series, is concerned with these issues-the ways in which psychology can contribute to understanding and helping to solve what has generally been termed an "energy crisis" .

This volume provides an overview of the political economy of coal in diverse country contexts. Coal is the largest source of greenhouse gas emissions globally, accounting for about 40 percent of energy-related CO2 emissions. Continued construction of coal-fired power plants could make the climate targets of the Paris Agreement infeasible to achieve. In spite of sharply declining costs for renewable energy sources, many countries still heavily rely on coal to meet their energy demand. The predominance of coal can only be adequately understood in light of the political factors that determine energy policy

formulation. To this end, this edited volume assembles a wide variety of case studies exploring the political economy of coal for across the globe. These includes industrial and developing nations, coal importers and exporters as well as countries that are either substantial coal users, are just beginning to ramp up their capacities, or have already initiated a coal phase-out. Importantly, all case studies are structured along a unifying framework that focuses on the central actors driving energy policy formulation, their main objectives as well as the context that determines to what extent they can influence policy making. This large set of comparable studies will permit drawing conclusions regarding key similarities as well as differences driving coal use in different countries. This book will be of great interest to students and scholars of energy, climate change, resource management, and sustainable development. It will also appeal to practitioners and policymakers involved in sustainable development. The Open Access version of this book, available at www.taylorfrancis.com, has been made available under a Creative Commons Attribution- Non Commercial- No Derivatives 4.0 license.

"An intimate and deeply human memoir that shows why we should all be concerned about nuclear safety, and the dangers of ignoring science in the name of national security."—Rebecca Skloot, #1 New York Times bestselling author of *The Immortal*

Life of Henrietta Lacks A shocking account of the government's attempt to conceal the effects of the toxic waste released by a secret nuclear weapons plant in Colorado and a community's vain search for justice—soon to be a feature documentary
Kristen Iversen grew up in a small Colorado town close to Rocky Flats, a secret nuclear weapons plant once designated "the most contaminated site in America."
Full Body Burden is the story of a childhood and adolescence in the shadow of the Cold War, in a landscape at once startlingly beautiful and--unknown to those who lived there--tainted with invisible yet deadly particles of plutonium. It's also a book about the destructive power of secrets--both

family and government. Her father's hidden liquor bottles, the strange cancers in children in the neighborhood, the truth about what was made at Rocky Flats--best not to inquire too deeply into any of it. But as Iversen grew older, she began to ask questions and discovered some disturbing realities. Based on extensive interviews, FBI and EPA documents, and class-action testimony, this taut, beautifully written book is both captivating and unnerving.

Generation of Electrical

Energy is written primarily

for the undergraduate students of electrical engineering while also covering the syllabus of AMIE and act as a refresher for the professionals in the field. The subject itself is now rejuvenated with important new developments. With this in view, the book covers conventional topics like load curves, steam generation, hydro-generation parallel operation as well as new topics like new sources of energy generation, hydrothermal coordination, static reserve reliability

evaluation among others.

The Political Economy of Coal
S. Chand Publishing

Emerged from the Lewinian tradition of research into organizational behavior, motivation, and change, here is a conceptual but practical way for HR professionals and others in today's organizations to understand better, more quickly and reliably, what the underlying human problems in their organizations are. Cunningham proceeds from the conviction that the key to solving organizational problems is in

the hands of people, and that when people talk about the problems they experience they are reflecting their values and beliefs. The way to get people to do that is through a style of inquiry called indirect questioning--the Echo approach. This approach, which managers and executives in all types of organizations will find helpful and extensively useful is the subject of Cunningham's examination. The Echo approach is designed to bring to the surface and measure the values and beliefs held by a group of people and

the organizations they comprise. Cunningham illustrates how this approach works, how to design interviews, surveys, and observations that actually echo peoples' values and beliefs--the obvious ones and those they keep hidden. Readable, well illustrated with cases and examples, this book will help executives at all levels understand better what people in these organizations are actually thinking and saying. In doing so it will help organizations become more productive and be

more desirable places to work. *Job interview questions and answers for hiring on Offshore Oil and Gas Rigs*

Each year billions of dollars are being spent in the area of nuclear power generation to design, construct, manufacture, operate, and maintain various types of systems around the globe. Many times these systems fail due to safety, reliability, human factors, and human error related problems. The main objective of this book is to combine nuclear power

plant safety, reliability, human factors, and human error into a single volume for those individuals that work closely during the nuclear power plant design phase, as well as other phases, thus eliminating the need to consult many different and diverse sources in obtaining the desired information.

May Excitement Follow You
Everywhere By: James Nibb The

title, "May Excitement Follow You Everywhere," is an ancient Chinese curse written in Confucian times when peace and tranquility were the norms. These are the adventures of a fuel utilization advisor to power, coal, oil, gas, and biomass companies around the world. From a low achievement beginning, the author climbed the ladder through narrow squeaks, sexual encounters and getting used to the customs of many different places round the world, becoming an established authority in his own field. This involved, at times, traveling over the Pacific or Atlantic Oceans every weekend on boring as well as wild flights and even very dangerous flights with equally dangerous situations in the field.

The wildest times occurred in Colombia, Germany, Israel, Korea, Philippines, UK, and the USA. The book is mainly concerned with the interaction between people, but includes some technical discussion to aid understanding. Excitement never ends (unfortunately?).

Petrogav International provides courses for participants that intend to work on offshore drilling and production platforms. Training courses are taught by professionals from the oil and gas industry with current knowledge and years of field experience. The participants will get all the necessary competencies to work on the offshore drilling platforms and on the offshore production platforms. It is intended also for non-drilling

and non-production personnel who work in drilling, exploration and production industry. This includes marine and logistics personnel, accounting, administrative and support staff, environmental professionals, etc. This course provides a non-technical overview of the phases, operations and terminology used on offshore oil and gas platforms. It is intended also for non-production personnel who work in the offshore drilling, exploration and production industry. This includes marine and logistics personnel, accounting, administrative and

support staff, environmental professionals, etc. No prior experience or knowledge of drilling operations is required. This course will provide participants a better understanding of the issues faced in all aspects of production operations, with a particular focus on the unique aspects of offshore operations. *Questions and Answers about Nuclear Power Plants* Petrogav International Human reliability, error, and human factors in the area of power generation have been receiving increasing attention in recent years. Each year billions of dollars are spent in the area of

power generation to design, construct/manufacture, operate, and maintain various types of power systems around the globe, and such systems often fail due to human error. This book compiles various recent results and data into one volume, and eliminates the need to consult many diverse sources to obtain vital information. It enables potential readers to delve deeper into a specific area, providing the source of most of the material presented in references at the end of each chapter. Examples along with solutions are also provided at appropriate places, and there are numerous problems for testing the reader's comprehension. Chapters cover a broad range of topics, including general methods

for performing human reliability and error analysis in power plants, specific human reliability analysis methods for nuclear power plants, human factors in control systems, and human error in power plant maintenance. They are written in such a manner that the potential reader requires no previous knowledge to understand their contents. "Human Reliability, Error, and Human Factors in Power Generation" will prove useful to many individuals, including engineering professionals working in the power generation industry, researchers, instructors, and undergraduate and graduate students in the field of power engineering.

How do educators engage students in community action projects without telling them what to think, how to think, or what to do? Is it possible to integrate social justice organizing into the curriculum without imposing one's political views on students? In *Actions Speak Louder than Words*, longtime activist and teacher educator Celia Oyler delves into such

questions through firsthand accounts of social action projects. By moving beyond charity work or volunteerism, she shows how community activism projects offer fertile ground for practicing democratic engagement as part of classroom work. *Actions Speak Louder than Words* is a systematic, qualitative study offering in-depth and detailed portraits of teachers who design social action projects as part of the regular classroom curriculum. Each case forms a chapter organized as a narrative that includes

excerpts from classroom dialogues, and interviews with students, teachers, and parents describing their social action projects with sufficient detail to give educators guidance for designing such projects for their own classrooms. The final chapter examines power, pedagogy, and learning outcomes across the cases, providing specific guidance to educators wishing to take up such projects and offering instructional and procedural advice as well as cautions. A fresh new example of taking up

the challenge to teach toward equity and social justice, *Actions Speak Louder than Words* is an invaluable resource for educators who are passionate about the possibility of integrating activism and advocacy into curriculum as a means to engage in strong democracy.
