---

Coleoptera, Diabrotica spp.) is a common pest in the Corn Belt of the United States. The corn rootworm complex includes three rootworm species: western, northern, and southern corn rootworms. Though these three insects are all considered rootworms, they have very

distinctive physical appearances as adults and some differences in biology. [The Insects: An Outline of Entomology: Amazon.co.uk ...](#)  
Lesson 1: Introduction to Entomology What is an insect? An insect is any kind of bug. Well, no, that is not a very descriptive or clear definition. An insect can be defined simply as a small, six-legged animal. Of the million kinds of animals that scientists have described and named, more than 800,000 are insects. Around 7,000 to 10,000

new kinds of insects are discovered every year.

CHAPTER 1 | INTRODUCTION - UPSpace | pdf Book Manual Free ...  
Insects are distinguished from other arthropods by their body, which is divided into

three major regions: (1) the head, which bears the mouthparts, eyes, and a pair of antennae, (2) the three-segmented thorax, which usually has three pairs of legs (hence "Hexapoda" ) adults and usually one or two pairs of wings, and (3) the many-segmented abdomen, which contains the digestive, excretory ...

Upspace  
Statistically,

most animals are insects, i.e., more than half the animals alive at any one time are insects. The aquatic insects, however, do not form a distinct taxonomic group. Some orders contain only species that are aquatic in some life stage, but other orders contain both aquatic and terrestrial species. Insects evolved on land and aquatic insects are essentially terrestrial insects that ...

development. SpaceX | Spacecraft, Rockets, & Facts | Britannica Introduction to Insects. If you have very young children, you might want to start with teaching them the parts common to most insects: head, thorax, abdomen, wings, antennae, compound and simple eyes, exoskeleton (hard outer skeleton), and six jointed legs. These six legs distinguish insects from bugs such as eight-legged arachnids. Also see our Insect Investigations Science Lesson
