Autism is the first book on the condition that seeks to combine medical, historical and cultural approaches to an understanding of the condition. Its purpose is to present a rounded portrayal of the ways in which autism is currently represented in the world, It focuses on three broad areas: the facts of scientific research, including new ideas surrounding research into genetics and neuroscience, as well as the details of diagnosis and therapy; the history of the condition as it developed through psychiatric approaches to the rise of parent associations, neurodiversity and autism advocacy; and the fictional and media narratives through which it is increasingly expressed in the contemporary moment. Accessible and written in clear English, Autism is designed for student audiences in English, Disability Studies, Cultural Studies, History, Sociology, and Medicine and Health, as well as medical practitioners and the general reader. Autism is a condition surrounded by misunderstanding and often defined by contestation and argument. The purpose of this book is to bring clarity to the subject of autism across the full range of its manifestations.

**Study Guide for Bettelheim/Brown/Campbell/Farrell's Introduction to General, Organic and Biochemistry, 9th** Routledge

Succeed in your course using this lab manual's unique blend of laboratory skills and exercises that effectively illustrate concepts from the main text, CHEMISTRY FOR TODAY: GENERAL, ORGANIC, AND BIOCHEMISTRY, 8e. The book's 15 general chemistry and 20 organic/biochemistry safety-scale laboratory experiments use small quantities of chemicals and emphasize safety and proper disposal of materials. Safety-scale' is the authors' own term for describing the amount of chemicals each lab experiment requires--less than macroscale quantities, which are expensive and hazardous, and more than microscale quantities, which are difficult to work with and require special equipment. Purity and Danger is acknowledged as a modern masterpiece of anthropology. It is widely cited in non-anthropological works and gave rise to a body of application, rebuttal and development within anthropology. In 1995 the book was included among the Times Literary Supplement's hundred most influential non-fiction works since WWII. Incorporating the philosophy of religion and science and a generally holistic approach to classification, Douglas demonstrates the relevance of anthropological enquiries to an audience outside her immediate academic circle. She offers an approach to understanding rules of purity by examining what is considered unclean in various cultures. She sheds light on the symbolism of what is considered clean and dirty in relation to order in secular and religious, modern and primitive life.

General, Organic and Biochemistry is praised for the way it gives students the tools they need to develop a working understanding of chemical principles—rather than just asking them to memorize facts. The new edition brings forward the same clear explanations, quality problem-solving support, helpful pedagogy, and applications coverage, adding new features and content to make the text even more accessible, effective, and relevant to its student audience. In order to motivate and thoroughly prepare students, particular attention is paid to relating the chemistry concepts to the human body, health, nutrition, and other important areas important to the student audience. Available in three versions: • General, Organic, and Biochemistry, Second Edition, 0-7167-4375-2—A hardback text of 26 chapters. • Organic and Biochemistry, Second Edition, 0-7167-7072-5—A paperback text containing all organic and biochemistry chapters, plus two general chemistry chapters not included in the GOB version. • An Introduction to General Chemistry, 0-7167-7073-3—A paperback text containing all 10 general chemistry chapters.

Autism, a neuro-developmental disability, has received wide but often sensationalistic treatment in the popular media. A great deal of clinical and medical research has been devoted to autism, but the traditional humanities disciplines and the new field of Disability Studies have yet to explore it. This volume, the first scholarly book on autism in the humanities, brings scholars from several disciplines together with adults on the autism spectrum to investigate the diverse ways that autism has been represented in novels, poems, autobiographies, films, and clinical discourses, and to explore the connections and demarcations between autistic and "neurotypical" creativity. Using an empathetic scholarship that unites professional rigor with experiential knowledge derived from the contributors' lives with or as autistic people, the essays address such questions as: In what novel forms does autistic creativity appear, and what unusual strengths does it possess? How do autistic representations--whether by or about autistic people--revise conventional ideas of cognition, creativity, language, (dis)ability and sociability? This timely and important collection breaks new ground in literary and film criticism, aesthetics, psychology, and Disability Studies.

Organic Chemistry W. H. Freeman

The 48 experiments in this well-conceived manual illustrate important concepts and principles in general, organic, and biochemistry. As in previous editions, three basic goals guided the development of all the experiments: (1) the experiments illustrate the concepts learned in the classroom; (2) the experiments are clearly and concisely written so that students will easily understand the task at hand, will work with minimal supervision because the manual provides enough information on experimental

---

procedures, and will be able to perform the experiments in a 2-1/2 hour laboratory period; and (3) the experiments are not only simple demonstrations, but also contain a sense of discovery. This edition includes many revised experiments and two new experiments.
