Despite the pressure to publish, few researchers know how to write up their work in order to maximize its potential for publication. This practical guide demystifies the journal publication process. Experienced researcher and author Dennis M McInerney shows how to plan for publication

from the beginning of a research project, how to write publishable articles and how to approach journals. Examples are drawn from a variety of internationally renowned journals and psychology fields. It ought to become "the" reference point for beginning, as well as experienced researchers in psychology and neighbouring disciplines.

These standards lay out the essential pieces information researchers need to report,

including detailed accounts of the methods they followed, data results and analysis, interpretations of their findings, and implications for future research. The book reflects updates to the original JARS and the MARS that meet researchers' developing needs in the behavioral, social, educational, and medical sciences. It analyzes examples from APA journals, offering readers easy-to-read advice for implementing these revised standards in their own writing while also

conforming with the APA Style guidelines laid out in the sixth edition of the Publication Manual. New and expanded chapters offer more detailed guidelines for reporting statistical analyses and unique elements of different types of research, including replication studies, clinical trials, and observational studies. This book is essential reading for experienced and early career researchers alike, as well as undergraduate and graduate students in research methods classes. It presents what

JARS recommends for information to include in all reports on new quantitative data collections, and addresses the material that appears first in a research manuscript.
