For each greenhouse gas, a Global Warming Potential (GWP) has been calculated to reflect how long it remains in the atmosphere, on average, and how strongly it absorbs energy. Gases with a higher GWP absorb more energy, per pound, than gases with a lower GWP, and thus contribute more to warming Earth.

such a rise in global temperatures as to prompt claims that ' the pause ' had ended. But expert analysts across the world found that wholesale ' adjustments ' had been made to the figures in the main surface temperature records, giving an impression that the global temperature trend had been rising much more than was justified by

[Global warming 2 - Time to Act - Google Sites](#)

Introduction. Global warming is the increase of average world temperatures as a result of what is known as the greenhouse effect. Certain gases in the atmosphere act like glass in a greenhouse, allowing sunlight through to heat the earth's surface but trapping the heat as it radiates back into space. As the greenhouse gases build up in the atmosphere the Earth gets hotter.

[Process - Global Warming Webquest - Google Sites](#)

Global warming is the term used to describe the rising of the average temperature on Earth. It has to do with the overall climate of the Earth rather than the weather on any given day. History of Global Temperatures. The Earth has gone through changes in temperature before. The Earth has even gone through several ice ages, when the temperature dropped significantly and a lot of the world was covered in ice glaciers.

[Global Warming: What Is It All About? - US EPA](#)

Introduction. Global warming and its potential harmful impacts are pressing issues facing scientists and policy makers all over the world. In this activity, you are being called into action by the United Nations to examine the causes and potential impacts of global warming and to develop policy recommendations for adoption by UN member nations.

[GLOBAL WARMING](#)

Global warming refers to the recent and ongoing rise in global average temperature near Earth's surface. It is caused mostly by increasing concentrations of greenhouse gases in the atmosphere. Global warming is causing climate patterns to change. However, global warming itself represents only one aspect of climate change.
