This includes a number of hardware
and software elements, describe
the target architecture and the
design environment. We start by
defining formally whan an
embedded system is. An embedded
system is a computerized system
that is purpose built for its
application. Each embedded system
has a special purpose and

constraints in their system
resources.

Lee and Seshia, Introduction to
Embedded Systems

Intelligent solutions are necessary to
overcome these challenges and to
provide reliable and secure systems to
the customer under a strict time and
financial budget. Solutions on Embedded
Systems documents results of several
innovative approaches that provide
intelligent solutions in embedded
systems. The objective is to present
mature approaches, to provide detailed
information on the implementation and to
discuss the results obtained.
