INTRODUCTION TO LINEAR REGRESSION ANALYSIS

Linear regression analysis is the most widely used of all statistical techniques: it is the study of linear, additive relationships between variables. Let Y denote the "dependent" variable whose values you wish to predict, and let X_1, \dots, X_k

denote the "independent" variables from which you wish to predict it, with the value of variable X_i in period t (or in row t of the data set) denoted by X_{it} .
