Solid waste management affects every person in the world. By 2050, the world is expected to increase waste generation by 70 percent, from 2.01 billion tonnes of waste in 2016 to 3.40 billion tonnes of waste annually. Individuals and governments make decisions about consumption and waste management that affect the daily health, productivity, and cleanliness of communities. Poorly managed waste is contaminating the world's oceans, clogging drains and causing flooding, transmitting diseases, increasing respiratory problems, harming animals that consume waste unknowingly, and affecting economic development. Unmanaged and improperly managed waste from decades of economic growth requires urgent action at all levels of society. *What a Waste 2.0: A Global Snapshot of Solid Waste Management to 2050* aggregates extensive solid waste data at the national and urban levels. It estimates and projects waste generation to 2030 and 2050. Beyond the core data metrics from waste generation to disposal, the report provides information on waste management costs, revenues, and tariffs; special wastes; regulations; public communication; administrative and operational models; and the informal sector. Solid waste management accounts for approximately 20 percent of municipal budgets in low-income countries and 10 percent of municipal budgets in middle-income countries, on average. Waste management is often under the jurisdiction of local authorities facing competing priorities and limited resources and capacities in planning, contract management, and operational monitoring. These factors make sustainable waste management a complicated proposition; most low- and middle-income countries, and their respective cities, are struggling to address these challenges. Waste management data are critical to creating policy and planning for local contexts. Understanding how much waste is generated—especially with rapid urbanization and population growth—as well as the types of waste generated helps local governments to select appropriate management methods and plan for future demand. It allows governments to design a system with a suitable number of vehicles, establish efficient routes, set targets for diversion of waste, track progress, and adapt as consumption patterns change. With accurate data, governments can realistically allocate resources, assess relevant technologies, and consider strategic partners for service provision, such as the private sector or nongovernmental organizations. *What a Waste 2.0: A Global Snapshot of Solid Waste Management to 2050* provides the most up-to-date information available to empower citizens and governments around the world to effectively address the pressing global crisis of waste. Additional information is available at <http://www.worldbank.org/what-a-waste>.

Utilizing each chapter to present core topical and timely examples, *Pop Culture Freaks* highlights the tension between inclusion and individuality that lies beneath mass media and commercial culture, using this tension as a point of entry to an otherwise expansive topic. He systematically considers several dimensions of identity—race, class, gender, sexuality, disability—to provide a broad overview of the field that encompasses classical and contemporary theory, original data, topical and timely examples, and a strong pedagogical focus on methods. *Pop Culture Freaks* encourages students to develop further research questions and projects from the material. Both quantitative and qualitative analyses are brought to bear in Kidd's examination of the labor force for cultural production, the representations of identity in cultural objects, and the surprising differences in how various audiences consume and use mass culture in their everyday lives. This new, revised edition includes updated examples and data to reflect a constantly changing pop culture landscape.

What happens when media and politics become forms of entertainment? As our world begins to look more and more like Orwell's 1984, Neil's Postman's essential guide to the modern media is more relevant than ever. "It's unlikely that Trump has ever read Amusing Ourselves to Death, but his ascent would not have surprised Postman." -CNN Originally published in 1985, Neil Postman's groundbreaking polemic about the corrosive effects of television on our politics and public discourse has been hailed as a twenty-first-century book published in the twentieth century. Now, with television joined by more sophisticated electronic media—from the Internet to cell phones to DVDs—it has taken on even greater significance. Amusing Ourselves to Death is a prophetic look at what happens when politics, journalism, education, and even religion become subject to the demands of entertainment. It is also a blueprint for regaining control of our media, so that they can serve our highest goals. "A brilliant, powerful, and important book. This is an indictment that Postman has laid down and, so far as I can see, an irrefutable one." -Jonathan Yardley, The Washington Post Book World

Digital media is changing the ways in which we communicate: we watch TV and movies online, call friends on computers, and read newspapers on cell phones. Placing convergence at the center of the discussion, **Converging Media: A New Introduction to Mass Communication**, Third Edition, by John V. Pavlik and Shawn McIntosh, uses the technologies we employ everyday to explain our current media environment - and to project where we might be headed. Rather than discussing each media industry in isolation, **Converging Media** shows how each branch of media (print, visual, and audio) relates to and influences the others. This enables students to see the inextricable and dynamic relationship between converging media and traditional media formats.

The Basics of Media Writing: A Strategic Approach helps readers develop the essential writing skills and professional habits needed to succeed in 21st-century media careers. This research-driven, strategy-based media writing textbook digs deeply into how media professionals think and write in journalism, public relations, advertising, and other forms of strategic communication. Authors Scott A. Kuehn and Andrew Lingwall have created two comprehensive writing models to help students overcome their problems in finding and developing story topics by giving them "starting points" to begin writing. The Professional Strategy Triangle model shows students how to think critically about the audience, the situation, and the message before starting a news story or persuasive piece and the FAJA four-point model asks students a series of questions about their story type (Fact, Analysis, Judgment, or Action) to guide them to the right angle or organizational structure for their message. Rooted in classical rhetorical methods, this step-by-step technique enables readers to strategically approach each writing task, no matter the format.
