Organic chemistry is the chemistry of compounds of carbon. The ability of carbon to link together to form long chain molecules and ring compounds as well as bonding with many other elements has led to a vast array of organic compounds. These compounds are central to life, forming the basis for organic molecules such as nucleic acids, proteins, carbohydrates, and lipids. In this Very Short Introduction Graham Patrick covers the whole range of organic compounds and their roles. Beginning with the structures and properties of the basic groups of organic compounds, he goes on to consider organic compounds in the areas of pharmaceuticals, polymers, food and drink, petrochemicals, and nanotechnology. He looks at how new materials, in particular the single layer form of carbon called graphene, are opening up exciting new possibilities for applications, and discusses the particular challenges of working with carbon compounds, many of which are colourless. Patrick also discusses techniques used in the field. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

The discovery of novel drugs that fill unmet medical needs is important for the health and well-being of people everywhere. However, the general public knows too little about the pathways through which basic research discoveries are translated into products that protect or restore human health. In the second edition of Hallelujah Moments, Eugene H. Cordes reveals the processes and pitfalls on the route from the laboratory bench to the bedside. These are adventure stories in which wit and grit created several of the most important drugs in human medicine. This new edition adds four new tales of drug discovery: for therapy of cancer, hepatitis C, HIV/AIDS, and for weight control. The stories emphasize the integration of basic research in academe and applied research in the pharmaceutical industry and introduce the key scientists. In each case, success resulted from imagination, risk-taking, problem solving, and perseverance. Cordes shares his firsthand knowledge of the drug-discovery world, having spent a long and distinguished career in both academic and industrial settings. The eleven drug discovery tales take the reader from concept to clinic for some of the most important drugs in human health including the statins, ACE inhibitors, antibiotics, avermectins, Januvia, and Taxol. These stories offer exciting insights into the fascinating world of drug discovery.

For many people, taking some form of medication is part of everyday life, whether for mild or severe illness, acute or chronic disease, to target infection or to relieve pain. However for most it remains a mystery as to what happens once the drug has been taken into the body: how do the drugs actually work? Furthermore, by what processes are new drugs discovered and brought to market? An Introduction to Medicinal Chemistry, sixth edition, provides an accessible and comprehensive account of this fascinating multidisciplinary field. Assuming little prior knowledge, the text is ideal for those studying the subject for the first time. In addition to covering the key principles of drug design and drug action, the text also discusses important current topics in medicinal chemistry. The subject is brought to life throughout by engaging case studies highlighting particular classes of drugs, and the stories behind their discovery and development.

Now optioned as a TV series for HBO, with executive producer George R. R. Martin! An award-winning literary author enters the world of magical realism with her World Fantasy Award-winning novel of a remarkable woman in post-apocalyptic Africa. In a post-apocalyptic Africa, the world has changed in many ways; yet in one region genocide between tribes still bloodies the land. A woman who has survived the annihilation of her village and a terrible rape by an enemy general wanders into the desert, hoping to die. Instead, she gives birth to an angry baby girl with hair and skin the color of sand. Gripped by the certainty that her daughter is different—special—she names her Onyesonwu, which means "Who fears death?" in an ancient language. It doesn't take long for Onye to understand that she is physically and socially marked by the circumstances of her conception. She is Ewu—a child of rape who is expected to live a life of violence, a half-breed rejected by her community. But Onye is not the average Ewu. Even as a child, she manifests the beginnings of a remarkable and unique magic. As she grows, so do her abilities, and during an inadvertent visit to the spirit realm, she learns something terrifying: someone powerful is trying to kill her. Desperate to elude her would-be murderer and to understand her own nature, she embarks on a journey in which she grapples with nature, tradition, history, true love, and the spiritual mysteries of her culture, and ultimately learns why she was given the name she bears: Who Fears Death.

This text is aimed at students entering first year university courses. The book is not meant to replace lecture material or conventional textbooks, but rather to enhance the course by challenging the student to test his or her knowledge. Indeed, the introduction emphasizes that students should read their lecture notes and textbook before tackling the self-learning text. The self-learning text concentrates on reactions and mechanisms with emphasis on rationalizing reactions rather than memorizing them. The text assumes knowledge covered in Patrick's Beginning Organic Chemistry. In each section of the book, the student is led through the subject matter by being given a short piece of theory, followed by a question. A space is then provided for the student's answer and then the full model answer is given. The next bit of theory follows and so on. In this way, students are encouraged to think about what they are reading at all times, rather than getting information 'gift wrapped'. Each section finishes with a summary of the most important facts.
