General relativity is a theory of gravitation that was developed by Albert Einstein between 1907 and 1915. According to general relativity, the observed gravitational effect between masses results from their warping of spacetime.. By the beginning of the 20th century, Newton's law of universal gravitation had been accepted for more than two hundred years as a valid description of the ...

Rated 4 out of 5 by do not require this from Well thought out exposition I am now over half way through the course. Professor Edwards is a good teacher, although a bit stronger on showing the

calculations than making some of the logic fully clear. However, this seems to be mainly the result of his being required to read out every mathematical expression - boring for him, very tedious for the ...

In mathematics, an integral assigns numbers to functions in a way that can describe displacement, area, volume, and other concepts that arise by combining infinitesimal data.

Integration is one of the two main operations of calculus, with its inverse operation, differentiation, being the other. Given a function f of a real variable x and an interval $[a, b]$ of the real line, the definite integral
