Offshore engineering is relatively poorly served for journals, with Offshore Engineer (1975 –) (monthly, Thomas Telford) and the newsletter Offshore Research Focus (monthly,

Hollobone, Hibbert) being two specialist publications currently available. Much offshore technology is, of course, dealt with in more general engineering journals.

Introduction to Offshore Engineering. ABOUT THE COURSE The course will begin by introducing the many different types of offshore structures. Following this, it will then introduce the sea loads on the structures which will be required to calculate the structural response.

Offshore geotechnical engineering is a sub-field of geotechnical engineering. It is concerned with foundation design, construction, maintenance and decommissioning for human-made structures in the sea. Oil platforms, artificial islands and submarine pipelines are examples of such structures. The seabed has to be able to withstand the weight of these structures and

the applied loads.

1.1. Use of subsea pipelines. Offshore pipelines are a main part of any offshore oil and gas project. Marine pipelines transport oil and gas from subsea wells to the platform and subsequently gas or oil from the platform to the coast for further process and distribution. There are also large pipeline for the transportation of gas or oil from one country to another.
