Need help in probability math? These lessons on probability will include the following topics: Samples in probability, Probability of events, Theoretical probability, Experimental probability, Probability problems, Tree diagrams,

Mutually exclusive events, Independent events, Dependent events, Factorial, Permutations, Combinations, Probability in Statistics, Probability and Combinatorics. **Assignments | Introduction to Probability and Statistics ...**

Probability Questions with Solutions. Tutorial on finding the probability of an event. In what follows, S is the sample space of the experiment in question and E is the event of interest. $n(S)$ is the number of elements in the sample space S and $n(E)$ is the number of

elements in the event E.

Listed in the following table are problem sets and solutions. For each problem set, there is also an interactive problem set checker. Students in the class were able to work on the assigned problems in the PDF file, then use the problem set checker to input each answer into a box and find out if the answer was correct or incorrect.

In this problem, there is a tendency to reason that since the opposite face is either heads or tails, the desired probability is $1/2$. This is, however, wrong, because given that heads came, it is

more likely that the two-headed coin was chosen. The correct reasoning is to calculate the conditional probability
