This book examines the deep roots of racism in the mental health system. Suman Fernando weaves the histories of racial discourse and clinical practice into a narrative of power, knowledge, and black suffering in an ostensibly progressive and scientifically grounded system. Drawing on a lifetime of experience as a practicing psychiatrist, he examines how the system has shifted in response to new forms of racism which have emerged since the 1960s, highlighting the widespread pathologization of black people, the impact of Islamophobia on clinical practice after 9/11, and various struggles to reform. Engaging and accessible, this book makes a compelling case for the entrenchment of racism across all aspects of psychiatry and clinical psychology, and calls for a paradigm shift in both theory and practice.

In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution—and the authors' excitement about it.
