An Introductory Study on Time Series Modeling and Forecasting

Introduction Dealing with data that is sequential in nature requires special techniques. Unlike traditional Ordinary Least Squares or Decision Trees where the observations are independent, time series data is such that there is correlation between successive samples. In other words, order very much matters.

Time Series Modelling 1. Plot the time series. Look for trends, seasonal components, step changes, outliers. 2. Transform data so that residuals are stationary. (a) Estimate and subtract T_t, St . (b) Differencing. (c) Nonlinear transformations ($\log, ? \cdot$). 3. Fit model to residuals. 48

Stationarity of a time series We can say that a time series is stationary when its mean and variance are not a function of time (i.e., they are constant through time).
