 A brief history of

The Invention of Clouds is a superbly written, fascinating account of the naming of clouds by English Quaker, Luke Howard. I now look at clouds with fresh eyes; I am thrilled that I can now name the clouds and understand some of the mechanisms that underpin their transitions as they morph from one form to another, just as Mr Howard did over 200 years ago.

Richard Hamblyn's The Invention of Clouds is a fascinating book that looks at the history of how clouds were classified into the types by which we know them today (eg cirrus,

altostratus, cumulus), It centres on Luke Howard, the meteorologist who first came up with a properly workable and universal cloud classification (there had been other attempts, but they hadn't been successful).
