The Absolute Beginner's Guide to Taking Photos Like the Pros McGraw-Hill/Irwin Pensions in the U.S. Economy is the fourth in a series on pensions from the National Bureau of Economic Research. For both economists and policymakers, this volume makes a valuable contribution to current research on pensions and the economics of the elderly. The contributors report on retirement saving of individuals and the saving that results from corporate funding of pension plans, and they examine particular aspects of the plans themselves from the employee's point of view.

Steven F. Venti and David A. Wise offer a careful analysis of who contributes to IRAs and why. Benjamin M. Friedman and Mark Warshawsky look at the reasons more retirement saving is not used to purchase annuities. Personal saving through pension contribution is discussed by B. Douglas Bernheim and John B. Shoven in the context of recent government and corporate pension funding changes. Michael J. Boskin and John B. Shoven analyze indicators of the economic well-being of the elderly, addressing the problem of why a large fraction of the elderly remain poor despite a general improvement in the economic status of the group as a whole. The relative merits of defined contribution versus defined benefit plans, with emphasis on the risk aspects of the two types of plans for the individual, are examined by Zvi Bodie, Alan J. Marcus, and Robert C. Merton. In the final paper, pension plans and worker turnover are the focus of the discussion by Edward P. Lazear and Robert L. Moore, who propose pension option value rather than the commonly used accrued pension wealth as a measure of pension value.

Famous Investment Quotes by Successful Investors John Wiley & Sons

The new paradigm for investing and building wealth in the twenty-first century. The Future for Investors reveals new strategies that take advantage of the dramatic changes and opportunities that will appear in world markets. Jeremy Siegel, one of the world ' s top investing experts, has taken a long, hard, and in-depth look at the market and the stocks that investors should acquire to build long-term wealth. His surprising finding is that the new technologies, expanding industries, and fast-growing countries that stockholders relentlessly seek in the market often lead to poor returns. In fact, growth itself can be an investment trap, luring investors into overpriced stocks and overly competitive industries. The Future for Investors shatters conventional wisdom and provides a framework for picking stocks that will be long-term winners. While technological innovation spurs economic growth, it has not been kind to investors. Instead, companies that have marketed tried-and-true

products for decades in slow-growth or even declining industries have superior returns to firms that develop " the bold and the new. " Industry sectors many regard as dinosaurs—railroads and oil companies, for example—have actually beat the market. Professor Siegel presents these strategies within the context of the coming shift in global economic power and the demographic age wave that will sweep the United States, Europe, and Japan. Contrary to the popular belief that these economic and demographic trends doom investors to poor returns, Professor Siegel explains the True New Economy and how to take advantage of the coming surge in invention, discovery, and economic growth. The faster the world changes, the more important it is for investors to heed the lessons of the past and find the tried-and-true companies that can help you beat the market and prosper in the years ahead.
