This book explores the US patent system, which helped practical minded innovators establish intellectual property rights and fulfill the need for achievement that motivates inventors and scholars alike. In this sense, the patent system was a parallel literature: a vetting institution similar to the conventional academic-scientific-technical journal insofar as the patent examiner was both editor and peer reviewer, while the patent attorney was a co-author or ghost writer. In probing evolving notions of novelty, non-obviousness, and cumulative innovation, Mark Monmonier examines rural address guides, folding schemes, world map projections, diverse improvements of the terrestrial globe, mechanical route-following machines that anticipated the GPS navigator, and the early electrical you-are-here mall map, which opened the way for digital cartography and provided fodder for patent trolls, who treat the patent largely as a license to litigate.

This book enhances learning about complex project

management principles and practices through the introduction and discussion of a portfolio of tools presented as an evolving toolbox. Throughout the book, industry practitioners examine the toolsets that are part of the toolbox to develop a broader understanding of complex project management challenges and the available tools to address them. This approach establishes a dynamic, structured platform for a comprehensive analysis and assessment of the modern, rapidly changing, multifaceted business environment to teach the next generation of project managers to successfully cope with the ever increasing complexity of the 21st century.

Video Game Law is aimed at game developers and industry professionals who want to better understand the industry or are in need of expert legal guidance. Given the rise in international

competition, the increasing complexity of video game features, and the explosive growth of the industry in general, game developers can quickly find themselves in serious trouble, becoming vulnerable to copyright infringement claims, piracy, and even security breaches. Not every video game company has the financial resources to retain in-house counsel – Video Game Law addresses many of the common pitfalls, legal questions, and scenarios facing the industry. S. Gregory Boyd, Brian Pyne and Sean F. Kane, the most prominent, sought after, and respected video game attorneys in the country, break down the laws and legal concepts that every game developer and industry professional needs to know to better protect their game and grow their company.

The following document is annex 1 to the report on a “Feasibility Study on Intellectual pre-diagnostic” service. The feasibility study itself set out to assess to what extent introducing an IP Prediagnostic service for SMEs – a structured “prediagnostic” audit of a firm’s situation in terms of IP – at EU level is doable and viable. Annex 1 is specifically a document, a manual, for service providers who want to implement such a service and need respective guidance on the various steps of implementation. Therefore, based on the study results, we propose a model for such a service with this document. The model draws heavily on documents and respective manuals created by the EPO, based on work of the Austrian patent office and the Serbian IP office, as well as the manuals and documentation of the “IP Audits Plus” service offered by the UK IP Office.¹ Parts of these manuals have been reused in the appropriate places, re-combined and extended to account for the study findings and the requirements for the service design to

have the service functional at European level. The authors wish to thank the EPO, the Austrian Patent Office, the Serbian Patent Office as well as the UKIPO for their permission to use their texts. Readers should be also advised that a distinction is being made between the service as delivered in the pilot project – which has a more defined mode of operation (as specified in relevant parts of this manual) – and the operation of the service in general, which allows for more options regarding a possible implementation. In particular, we incorporate flexibility to allow for different ways of implementation in different Member States. This refers particularly a) to who will be delivering the service and b) how the SMEs are going to be approached as well as c) what type of SMEs should be targeted.
