"For an engineer determined to refine and secure Internet operation or to explore alternative solutions to persistent problems, the insights provided by this book will be invaluable." —Vint Cerf, Internet pioneer TCP/IP Illustrated, Volume 1, Second Edition, is a detailed and visual guide to today's TCP/IP protocol suite. Fully updated for the newest innovations, it demonstrates each protocol in action through realistic examples from modern Linux, Windows, and Mac OS environments. There's no better way to discover

why TCP/IP works as it does, how it reacts to common conditions, and how to apply it in your own applications and networks. Building on the late W. Richard Stevens' classic first edition, author Kevin R. Fall adds his cutting-edge experience as a leader in TCP/IP protocol research, updating the book to fully reflect the latest protocols and best practices. He first introduces TCP/IP's core goals and architectural concepts, showing how they can robustly connect diverse networks and support multiple services running concurrently. Next, he carefully explains Internet addressing in both IPv4 and IPv6 networks. Then, he walks through TCP/IP's structure and function from the bottom up: from link layer protocols–such as Ethernet and Wi-Fi–through network, transport, and application layers. Fall thoroughly introduces ARP, DHCP, NAT, firewalls, ICMPv4/ICMPv6, broadcasting, multicasting, UDP, DNS, and much more. He offers extensive coverage of reliable transport and TCP, including connection management, timeout, retransmission, interactive data flow, and congestion control. Finally, he introduces the basics of security and cryptography, and illuminates the crucial modern protocols for protecting security and privacy, including EAP, IPsec, TLS, DNSSEC, and DKIM. Whatever your TCP/IP experience, this book will help you gain a deeper, more intuitive understanding of the entire protocol suite so you can build better applications and run more reliable, efficient networks.

Industries Springer Science & Business Media Creating Effective Learning Environments takes curriculum development to another level: it fills the gap between theory and practice. This text helps readers see the curriculum from a child's perspective and understand how that perspective is linked to learning and theory. It is the author's view that the centre of any curriculum is the child; this text begins not with general theories or applications that are suitable for many, but with each individual child. The theory and methodology of this text are integrated around the actual experiences of children, presented in a logical flow, and embracing current philosophies about integration, play, bias, and learning practices.

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Social and Economic Statistics Humana Since the discovery of actin by Straub in the 1950's and the pioneering work of Oosawa on actin self-assembly in helical laments in the 1960's, many books and conference proceedings have been published. As one of the most essential p-teins in life, essential for movement in organisms rangingfrom bacteria to higher eukaryotes, it is no surprise that actin has fascinated generations of scientists from many different elds. Actin can be considered as a "living treasure" of biology; the kinetics and thermodynamics of self-assembly, the dissipative nature of actin po- merization, the molecular interactions of monomeric and polymerized actin with regulators, the mechanical properties of actin gels, and more recently the force p- ducing motile and morphogenetic processes organized by the actin nanomachine in response to signaling, are all milestones in actin research.

Discoveries that directly derive from and provide deeper insight into the fundamental properties of actin are constantly being made, making actin an ever appealing research molecule. At the same time, the explosion in new technologies and techniques in biological sciences has served to attract researchers from an expanding number of disciplines, to study actin. This book presents the latest developments of these new multiscale approaches of force and movement powered by self-assembly processes, with the hope to opening our perspectives on the many areas of actin-based motility research.

Primary and incisional ventral hernias are common conditions often encountered in surgical practice. Because of the frequency of this problem it has come to be managed by surgeons in general, regardless of the type of hospital or the conditions dealt with in their daily practice. Laparoscopic surgery has demonstrated to have an

important role among the different technique described to repair ventral hernia with less recurrent rate, less morbidity and less overall cost than open conventional repair, with all the advange of the laparoscopic approach. As a result the indications for this surgical technique are currently being debated since the advantages are evident and progressive implementation is ensured. Now is the time to analyze the usefulness, results, technical variants, anatomic, physiologic and scientific basis and implications involved in implementation of laparoscopy as the technique of choice.

PLEASE NOTE: This is a summary of the book and NOT the original book. Creativity, Inc. by Ed Catmull: A 30-minute Summary Inside this Instaread Summary:Overview of the entire bookIntroduction to the Important people in the bookSummary and analysis of all the chapters in the bookKey Takeaways of the bookA Reader's Perspective Preview of this summary: Chapter 1 Every Sunday, as a kid, Catmull watched on TV The Wonderful World of Disney, where Disney explained how they made their animations and incorporated technological breakthroughs into their work. One day, Catmull had a life-changing realization: a good animation was measured by whether or not the character on the screen made you believe it was a thinking being. He decided he wanted to become an animator and create emotional characters. Catmull graduated with a double major in Physics and Computer Science from the University of Utah. In his graduate program he met professor Ivan Sutherland, a pioneer in computer graphics and director of the computer graphics program. The program was funded by the Advanced Research Projects Agency (ARPA), the creators of the first computer network, ARPANET, which would later evolve into the Internet. ARPA was developed as a response to the threat of the Soviet Sputnik satellite, the first of its kind. The U.S. felt threatened by Soviet technological advancements and they developed ARPA to stay up with the Soviets. To Catmull, the lesson to be learned from this was when the competition gets smart, you need to get smarter. Catmull found enormous inspiration in the computer graphics program, not only from the technology he was discovering but also from his fellow students. The collaborative and creative atmosphere he experienced there was something he later tried to emulate at Pixar. In 1972, Catmull made his first animated film, a digitized model of his left hand. Hand became a reference for state-of-the-art computer animation. Professor Sutherland came up with the idea of an exchange program with Disney. Disney would send an animator to the University of Utah to learn about new technologies, and the university would send one of their students to

learn about storytelling. Catmull was sent to propose....
