From the authors of the bestselling Hack Proofing Your Network! OPEC, Amazon, Yahoo! and E-bay: If these large, well-established and security-conscious web sites have problems, how can anyone be safe? How can any programmer expect to develop web applications that are secure? Hack Proofing Your Web Applications is the only book specifically written for application developers and webmasters who write

programs that are used on web sites. It covers Java applications, XML, ColdFusion, and other database applications. Most hacking books focus on catching the hackers once they've entered the site; this one shows programmers how to design tight code that will deter hackers from the word go. Comes with up-to-the-minute web based support and a CD-ROM containing source codes and sample testing programs. Unique approach: Unlike most hacking books this one is written for the application

In response to the CNO's tasking to examine Sea Supremacy within the context of SEA POWER 21, SSG XXII proposed the

concept of FORCEnet Engagement Packs (FnEPs). The FnEPs concept represents the operational construct for FORCEnet and demonstrates the power of FORCEnet by integrating a specific set of joint sensors, platforms, weapons, warriors, networks and command and control systems, for the purpose of performing mission-specific engagements. Initial pack asset

allocation and constitution will be based on a specific threat or mission; however, the capability to dynamically re-configure and re-allocate assets "on the fly," to reconstitute a new pack will enable cross-mission engagement capabilities. Integrating the six FORCEnet factors must focus on five critical functions we

term "Combat Reach Capabilities (CRCs)". These include: Integrated Fire Control (IFC), Automated Battle Management Aids (ABMAs), Composite Tracking (CT), Composite Combat Identification (CCID), and Common/Single Integrated Pictures (CP). FnEPs achieves tully integrated joint capabilities focused on the engagement chain, and represents

a revolutionary transformation in Naval operations complimentary to FORCEnet, SEA POWER 21, and Sea Supremacy. This thesis has two goals. First, we will conduct analysis to better understand the FnEPs Concept including the myriad of technical, organizational I, and programmatic requirements for its implementation. Second, we will
