Alternative and Activist New Media provides a rich and accessible overview of the ways in which activists, artists, and citizen groups around the world use new media and information technologies to gain visibility and voice, present alternative or marginal views, share their own DIY information systems and content, and otherwise resist, talk back to, or confront dominant media culture. Today, a lively and contentious cycle of capture, cooptation, and subversion of information, content, and system design marks the relationship between the mainstream 'center' and the interactive, participatory 'edges' of media culture. Five principal forms of alternative and activist new media projects are introduced, including the characteristics that make them different from more conventional media forms and content. The book traces the historical roots of these projects in alternative media, social movements, and activist art, including analyses of key case studies and links to relevant electronic resources. Alternative and Activist New Media will be a useful addition to any course on new media and society, and essential for readers interested in new media activism.

Suicides, excessive overtime, and hostility and violence on the factory floor in China. Drawing

on vivid testimonies from rural migrant workers, student interns, managers and trade union staff, Dying for an iPhone is a devastating expose of two of the world's most powerful companies: Foxconn and Apple. As the leading manufacturer of iPhones, iPads, and Kindles, and employing one million workers in China alone, Taiwanese-invested Foxconn's drive to dominate global electronics manufacturing has aligned perfectly with China's goal of becoming the world leader in technology. This book reveals the human cost of that ambition and what our demands for the newest and best technology means for workers. Foxconn workers have repeatedly demonstrated their power to strike at key nodes of transnational production, challenge management and the Chinese state, and confront global tech behemoths. Dying for an iPhone allows us to assess the impact of global capitalism's deepening crisis on workers.'

In 2009, BlackBerry controlled half of the smartphone market. Today that number is one percent. What went so wrong? Losing the Signal is a riveting story of a company that toppled global giants before succumbing to the ruthlessly competitive forces of Silicon Valley. This is not a conventional tale of modern business failure by fraud and greed. The rise and fall of BlackBerry reveals the dangerous speed at which innovators race along the information superhighway. With unprecedented access to key players,

senior executives, directors and competitors, Losing the Signal unveils the remarkable rise of a company that started above a bagel store in Ontario. At the heart of the story is an unlikely partnership between a visionary engineer, Mike Lazaridis, and an abrasive Harvard Business school grad, Jim Balsillie. Together, they engineered a pioneering pocket email device that became the tool of choice for presidents and CEOs. The partnership enjoyed only a brief moment on top of the world, however. At the very moment BlackBerry was ranked the world's fastest growing company internal feuds and chaotic growth crippled the company as it faced its gravest test: Apple and Google's entry in to mobile phones. Expertly told by acclaimed journalists, Jacquie McNish and Sean Silcoff, this is an entertaining, whirlwind narrative that goes behind the scenes to reveal one of the most compelling business stories of the new century.
