The iPhoto software is a photo manipulation package that was developed by Apple Inc. in 2002. Since that year until this year, every Macintosh computer that has been released has contained this software. The iPhoto software can be used to organize photos, edit, print, import and share digital photos. iPhoto was first announced at the Macworld 2002 conference by Steve Jobs and then the iOS version was announced by Tim Cook in 2012. It was transitioned to the new Photos app which replaced iPhoto in February 2015. The software package has many features that can be used to manipulate digital photos in anyway the user desires. Features that can edit the color, shape, backgrounds and many other things. The sky is the limit based on the user's creativity. With the continuity feature, they are not limited to any one device, they can capture their picture and do their editing right on that device. They can also switch across to a different device to carry out the editing there if they so desire.
