This special issue collects our current knowledge of the mechanical processing of acoustic signals by the cochlea and its containing structures. Many workers in diverse disciplines in otology use the facts from cochlear mechanics for the interpretation of their results. Presented here for the first time is the development of a three-dimensional mechanical model of the curved cochlea including fluid-structure couplings. An important approach for future cochlear modeling is shown by the provision of geometrical data for the input of three-dimensional finite element models by microtomographic imaging. A remarkable article tries to demonstrate a connection between outer hair cell mechanics and the complex phenomenon of tinnitus and will be of special interest for stress engineers. Owing to its strong interdisciplinarity, this issue is not only intended for biophysicists, ENT clinicians and audiologists but also for radiologists, biomechanical engineers and computer engineers.

On leaving school or university, you feel pretty pleased with yourself. You've learnt a lot, your'e well-read and you know a whole bunch of obscure facts guaranteed at some point to appear in the questions on Mastermind or University Challenge. Then you get a job, and ten years later you're more eloquent and eager to argue about Britney and Big Brother than Beckett and the Brontes. Sound familiar? Well it happened to AJ Jacobs too. As an editor at Esquire, Jacobs had built up a rather impressive knowledge of celebrity trivia - and the cure was going to take a long time. While others might take to reading a broadsheet at the weekend, Jacobs chose to read the Encyclopaedia Britannica. All 33,000 pages of it. Bill Bryson meets Schott's Original Miscellany meets Woody Allen. Part assemblage of fascinating trivia, part journey through adulthood, all laugh-out-loud funny.

' A brilliantly funny and unique story about love, loss, family and fitting in. I laughed, I cried - I loved it. ' Holly Martin The perfect house, the perfect husband and the perfect life... or is she just faking it? Life has been a bit of a rollercoaster for Ella. Growing up as the 'less successful' identical twin to her 'perfectly successful' sister, Emma, has left her feeling isolated, inadequate and let's face it... a little bitter. When Emma unexpectedly reaches out to Ella in a time of need, Ella suddenly finds herself with the opportunity to fill in for her sister and experience how the other half live. But as Ella navigates the world of gossiping mothers, rebellious teens and trying to play the model housewife (not to mention avoiding the temptation of attractive men at the school gates...) will she discover that all is not always as it seems on the other side? Discover the laugh-out-loud new romantic comedy from top 10 bestseller Portia MacIntosh. Perfect for fans of Mhairi McFarlane, Sophie Randal and Lindsey Kelk. What readers are saying about Faking It: 'I loved Ella, the heroine of this book. She's a truly "real" character, and everything you would want in a friend! 'I loved this book easy reading, funny at times good story line. It 's hard to find a book I can easily get into with having dyslexia. But this one worked for me.' 'Completely hilarious even with actual laugh out loud moments.'

From world-renowned autism spokesperson, scientist, and inventor Temple Grandin -- a book of personal stories, inventions, and facts that will blow young inventors' minds and make them soar. Have you ever wondered what makes a kite fly or a boat float? Have you ever thought about why snowflakes are symmetrical, or why golf balls have dimples? Have you ever tried to make a kaleidoscope or build a pair of stilts? In *Calling All Minds*, Temple Grandin explores the ideas behind all of those questions and more. She delves into the science behind inventions, the steps various people took to create and improve upon ideas as they evolved, and the ways in which young inventors can continue to think about and understand what it means to tinker, to fiddle, and to innovate. And laced throughout it all, Temple gives us glimpses into her own childhood tinkering, building, and inventing. More than a blueprint for how to build things, in *Calling All Minds* Temple Grandin creates a blueprint for different ways to look at the world. And more than a call to action, she gives a call to imagination, and shows readers that there is truly no single way to approach any given problem--but that an open and inquisitive mind is always key. Praise for *Calling All Minds*: "An impassioned call to look at the world in unique ways with plenty of practical advice on how to cultivate a curious, inquiring, imaginative mind." —Kirkus Reviews "Both practical and inspirational, this useful book describes an overall approach to viewing the world creatively, as exemplified by the numerous projects and supporting material provided here." —VOYA "Grandin offers a nuanced perspective on the qualities of a successful inventor—notably, a sense of wonder and curiosity, careful observation, and the willingness to learn from mistakes." —Publishers Weekly

Barr Group's Embedded C Coding Standard was developed to help firmware engineers minimize defects in embedded systems. Unlike the majority of coding standards, this standard focuses on practical rules that keep bugs out - including techniques designed to improve the maintainability and portability of embedded software. The rules in this coding standard include a set of guiding principles, as well as specific naming conventions and other rules for the use of data types, functions, preprocessor macros, variables, and other C language constructs. Individual rules that have been demonstrated to reduce or eliminate certain types of defects are highlighted. The BARR-C standard is distinct from, yet compatible with, the MISRA C Guidelines for Use of the C Language in Critical Systems. Programmers can easily combine rules from the two standards as needed.
