On October 23, 2001, Apple Computer, a company known for its chic, cutting-edge technology -- if not necessarily for its dominant market share -- launched a product with an enticing promise: You can carry an entire music collection in your pocket. It was called the iPod. What happened next exceeded the company's wildest dreams. Over 50 million people have inserted the device's distinctive white buds into their ears, and the iPod has become a global obsession. The Perfect Thing is the definitive account, from design and marketing to startling impact, of Apple's iPod, the signature device of our young century. Besides being one of the most successful consumer products in decades, the iPod has changed our behavior and even our society. It has transformed Apple from a computer company into a consumer electronics giant. It has remolded the music business, altering not only the means of distribution but even the ways in which people enjoy and think about music. Its ubiquity and its universally acknowledged coolness have made it a symbol for the digital age itself, with commentators remarking on "the iPod generation." Now the iPod is beginning to transform the broadcast industry, too, as podcasting becomes a way to access radio and television programming. Meanwhile millions of Podheads obsess about their gizmo, reveling in the personal soundtrack it offers them, basking in the social cachet it lends them, even wondering whether the device itself has its own musical preferences. Steven Levy, the chief technology correspondent for Newsweek magazine and a longtime Apple watcher, is the ideal writer to tell the iPod's tale. He has had access to all the key players in the iPod story, including Steve Jobs, Apple's charismatic cofounder and CEO, whom Levy has known for over twenty years. Detailing for the first time the complete story of the creation of the iPod, Levy explains why Apple succeeded brilliantly with its version of the MP3 player when other companies

didn't get it right, and how Jobs was able to convince the bosses at the big record labels to license their music for Apple's groundbreaking iTunes Store. (We even learn why the iPod is white.) Besides his inside view of Apple, Levy draws on his experiences covering Napster and attending Supreme Court arguments on copyright (as well as his own travels on the iPod's click wheel) to address all of the fascinating issues -- technical, legal, social, and musical -- that the iPod raises. Borrowing one of the definitive qualities of the iPod itself, The Perfect Thing shuffles the book format. Each chapter of this book was written to stand on its own, a deeply researched, wittily observed take on a different aspect of the iPod. The sequence of the chapters in the book has been shuffled in different copies, with only the opening and concluding sections excepted. "Shuffle" is a hallmark of the digital age -- and The Perfect Thing, via sharp, insightful reporting, is the perfect guide to the deceptively diminutive gadget embodying our era.

For the past decade, the rapid development of the ergonomics disciplines as well as the fast growing economy in the Asian region have been attracting the attention of the international ergonomics community. Although East Asia has been changing from a traditional agriculture-oriented society into a modern industry-oriented society and its economy covers a great deal of shared interests across the continents, yet the ergonomics related knowledge and practice are still in its infancy. Because of the geographic proximity and a strong historical, cultural and technology affinity, it is vitally important to maintain good communication and cooperation among the individuals as well as among the ergonomics organizations in the region. This symposium, EAEFS, has provided supporting ergonomics organizations and interested participants a forum to exchange ideas, build friendship, foster greater understanding of and among these individuals and organizations, and develop perspectives concerning ergonomics issues in this region and beyond. This volume contains the selected papers presented at the Second East Asian Ergonomics Federation Symposium (EAEFS), held from October 4 - 8, 2011 at the National Tsing Hua University in Taiwan. The Second EAEFS, endorsed by the International Ergonomics Association (IEA), aims to consolidate the established ties within East Asia and to extend the cooperation among ergonomics researchers, professionals, and practitioners in the region to other regions in Asia and the world. Senior scholars and leaders from Asian countries have shared their wisdom, experience, insights, and visions on past, current and future ergonomics efforts in Asia. The papers contributing to this book address the latest research and application in accordance with the theme of the symposium, "Ergonomics in Asia: Development, Opportunities and Challenges," and cover the following areas: Virtual Environments & Design, Aging & Work Ability, Usability & Interface, Biomechanics & Anthropometry, and Occupational Safety & Health.

This book, the first full-length text on the subject, explores the everyday use of music listening while driving a car. It presents the relationship between cars and music in an effort to understand how music behaviour in the car can either enhance driver safety or place the driver at increased risk of accidents. A great deal of work has been done to investigate and reduce driver distraction and inattention, but this book is the first to focus on in-cabin aural backgrounds of music as a contributing factor to human error and traffic violations. *Driving With Music* begins by outlining the automobile, its relationship to society, and the juxtaposition of music with the automobile as a complete package. It then highlights concepts from the fields of music perception and cognition, and, within this framework, looks at the functional use of background music in our everyday lives. Driver music behaviours - both adaptive and maladaptive - are explored, with the focus on contradictions and ill-effects of in-car music listening. To conclude, implications, applications and countermeasures are suggested.

Over the past fifty years, design and branding have become omnipotent in the market and have made their way to other domains as well. Given their potential to divide humans into categories and label their worth and value, design and branding can wield immense but currently unharnessed powers of social change. Groups designed as devalued can be undesigned, redesigned and rebranded to seamlessly and equivalently participate in community, work and civic life. This innovative book argues that disability as a concept and category is created, reified, and segregated through current design and branding that begs for creative change. Transcending models of disability that locate it either as an embodied medical condition or as a socially constructed entity, this book challenges the very existence and usefulness of the category itself. Proposing and illustrating creative and responsible design, DePoy and Gilson include thinking and action strategies that are useful and potent for "undesigning", redesigning, and rebranding to meet the full range of human needs and to enhance full participation in local through global communities. Divided into two parts, the first section presents a critical examination of disability as a designed and branded phenomenon, exploring what exactly is being designed and branded and how. The second part investigates the redesign of disability and provides principles for redesign and rebranding illustrated with examples from high-tech to place-based sustainable strategies. The book provides a unique and contemporary framework for thinking about disability as well as providing relevant design and branding guidance to designers and engineers interested in embodiment issues.

How design for disabled people and mainstream design could inspire, provoke, and radically change each other. Eyeglasses have been transformed from medical necessity to fashion accessory. This revolution has come about through embracing the design culture of the fashion industry. Why shouldn't design sensibilities also be applied to hearing aids, prosthetic limbs, and communication aids? In return, disability can provoke radical new directions in mainstream design. Charles and Ray Eames's iconic furniture was inspired by a molded plywood leg splint that they designed for injured and disabled servicemen. Designers today could be similarly inspired by disability. In *Design Meets Disability*, Graham Pullin shows us how design and disability can inspire each other. In the Eameses' work there was a healthy tension between cut-to-the-chase problem solving and more playful explorations. Pullin offers examples of how design can meet disability today. Why, he asks, shouldn't hearing aids be as fashionable as eyewear? What new forms of braille signage might proliferate if designers kept both sighted and visually impaired people in mind? Can simple designs avoid the need for complicated accessibility features? Can such emerging design methods as "experience prototyping" and "critical design" complement clinical trials? Pullin also presents a series of interviews with leading designers about specific disability design projects, including stepstools for people with restricted growth, prosthetic legs (and whether they can be both honest and beautifully designed), and text-to-speech technology with tone of voice. When design meets disability, the diversity of complementary, even

contradictory, approaches can enrich each field.

Originating from the bestselling special-edition tribute *Bloomberg Businessweek Steve Jobs 1955-2011*, here is *Bloomberg Businessweek's* biography of a boundary-breaking thinker and endlessly astute businessman. From his birth and adoption by the Jobs family to his days in the California counterculture making games for Atari; from the peak of the insurgency against Microsoft to his forced exile from Apple; from Woody and Buzz to iTunes and the iPad, it's all here, a signature American life as told by our staff of writers and reporters, and the people who knew Jobs best. Here are first person accounts from business leaders who knew and worked with him, from Marc Andreessen to John Sculley. Pieces are written by Steve Jurvetson, John Sculley, Sean Wilsey and William Gibson, as well as Bloomberg News and Bloomberg Businessweek reporters and editors Jim Aley, Brad Stone and Peter Burrows. Eric Schmidt sums up his feeling about Steve Jobs, "He had a level of perception about feelings and emotions that was far beyond anything I've met in my entire life. His legacy will last for many years, through people he's trained and people he's influenced. But what death means is you can't call-you can't call him. It's a loss. I'll miss talking to him." This insightful and fascinating biography includes an informative timeline, glossary, and over 60 photos, that give insight into his life and times.
