Violence so often begets violence. Victims respond with revenge only to inspire seemingly endless cycles of retaliation. Conflicts between nations, between ethnic groups, between strangers, and between family members differ in so many ways and yet often share this dynamic. In this powerful and timely book Martha Minow and others ask: What explains these cycles and what can break them? What lessons can we draw from one form of violence that might be relevant to other forms? Can legal responses to violence provide accountability but avoid escalating vengeance? If so, what kinds of legal institutions and practices can make a difference? What kinds risk failure? Breaking the Cycles of Hatred represents a unique blend of political and legal theory, one that focuses on the double-edged role of memory in fueling cycles of hatred and maintaining justice and personal integrity. Its centerpiece comprises three penetrating essays by Minow. She argues that

innovative legal institutions and practices, such as truth commissions and civil damage actions against groups that sponsor hate, often work better than more conventional criminal proceedings and sanctions. Minow also calls for more sustained attention to the underlying dynamics of violence, the connections between intergroup and intrafamily violence, and the wide range of possible responses to violence beyond criminalization. A vibrant set of freestanding responses from experts in political theory, psychology, history, and law examines past and potential avenues for breaking cycles of violence and for deepening our capacity to avoid becoming what we hate. The topics include hate crimes and hate-crimes legislation, child sexual abuse and the statute of limitations, and the American kidnapping and internment of Japanese Latin Americans during World War II. Commissioned by Nancy Rosenblum, the essays are by Ross E. Cheit, Marc Galanter, Fredrick C. Harris, Judith Lewis Herman, Carey Jaros, Frederick M. Lawrence, Austin Sarat, Ayelet Shachar, Eric K. Yamamoto, and Iris Marion Young.

The Industrial Revolution, powered by oil and other fossil fuels, is spiraling into a dangerous endgame. The price of gas and food are climbing, unemployment remains high, the housing market has tanked, consumer and government debt is soaring, and the recovery is slowing. Facing the prospect of a second collapse of the global economy, humanity is desperate for a sustainable economic

game plan to take us into the future. Here, Jeremy Rifkin explores how Internet technology and renewable energy are merging to create a powerful "Third Industrial Revolution." He asks us to imagine hundreds of millions of people producing their own green energy in their homes, offices, and factories, and sharing it with each other in an "energy internet," just like we now create and share information online. Rifkin describes how the five-pillars of the Third Industrial Revolution will create thousands of businesses, millions of jobs, and usher in a fundamental reordering of human relationships, from hierarchical to lateral power, that will impact the way we conduct commerce, govern society, educate our children, and engage in civic life. Rifkin's vision is already gaining traction in the international community. The European Union Parliament has issued a formal declaration calling for its implementation, and other nations in Asia, Africa, and the Americas, are quickly preparing their own initiatives for transitioning into the new economic paradigm. The Third Industrial Revolution is an insider's account of the next great economic era, including a look into the personalities and players — heads of state, global CEOs, social entrepreneurs, and NGOs — who are pioneering its implementation around the world.
