A carnivore / k ʁ n v ɹ /, meaning "meat eater", is an animal whose food and energy requirements derive solely from animal tissue or meat, whether through hunting or scavenging. Animals that depend solely on animal flesh for their nutrient requirements are called obligate carnivores while those that also consume non-animal food are called facultative carnivores. Omnivores also consume both animal and non-animal food, and, apart from the more general definition, there is no clearly ...

The 15 Basic Carnivore Families - ThoughtCo

raccoon. red fox. skunk. weasel. wolf. wolverine. Each of these carnivores depend on smaller animals to hunt and eat as sustenance. However, the animals they hunt depend on their ecosystem. Raccoons and lions are both carnivores, for example, but raccoons eat insects and fish while lions hunt zebras and gazelles.

Carnivores

Carnivore, any member of the mammalian order Carnivora (literally, "flesh devourers" in Latin), comprising more than 270 species. In a more general sense, a carnivore is any animal (or plant; see carnivorous plant) that eats other animals, as opposed to a herbivore, which eats plants. Although the species classified in this order are basically meat eaters, a substantial number of them, especially among bears and members of the raccoon family, also feed extensively on vegetation and are ...

Biology: What Is A Carnivore: Level 1 activity for kids ...

A mammal can be a carnivore (meat eater), herbivore (plant eater) or omnivore (meat and plant eater). By looking at the teeth, eye position and feet you can usually identify which of the three it is. First let's look at teeth. If the mammal has long, sharp canine teeth next to the front (incisor) teeth and also has sharp cheek teeth (carnissials) it is a carnivore.
