This book provides a snapshot of the latest theoretical and empirical work on social psychological approaches to stigma and group inequality. It focuses on the perspective of the stigmatized groups and discusses the effects of the stigma on the individual, the interacting partners, the groups to which they belong, and the relations between the groups. Broken into three major sections, Stigma and Group Inequality: *discusses the tradeoffs that stigmatized individuals must contend with as they weigh the benefits derived from a particular response to stigma against the costs associated with it; *explores the ways in which environments can threaten one's intellectual performance, sense of belonging, and self concept; and *argues that the experience of possessing a stigmatized identity is shaped by social interactions with others in the stigmatized group as well as members of other groups. Stigma and Group Inequality is a valuable resource for students and scholars in the fields of psychology, sociology, social work, anthropology, communication, public policy, and political science, particularly for courses on stigma, prejudice, and intergroup relations. The book is also accessible to teachers, administrators, community leaders, and concerned citizens who are trying to understand and improve the plight of stigmatized individuals in school, at work, at home, in the community, and in society at large.

Roosevelt Island captures the fascinating and sometimes curious history of an island located halfway between Manhattan and Queens in the East River. In 1824, the city of New York purchased Blackwell's Island, later Welfare Island, as a site for its lunatic asylum, penitentiary, workhouses, and almshouses. In the years that followed, the island was a temporary home for several of New York City's famous and infamous. William Marcy Tweed, better known as "Boss Tweed," was imprisoned at the penitentiary in the 1870s. Mae West was incarcerated in 1927 at the Workhouse for Women after her appearance in a play called Sex. After many institutions were closed or relocated, Welfare Island was virtually ignored until 1973, when it was reborn as Roosevelt Island, which is now a model planned community and thriving home to almost ten thousand people.

Ethical Obligations and Decision-Making in Accounting gives students a robust ethical framework that is crucial for accountants in the post-Enron era. Incorporating the principles of the AICPA code and other systems of ethics, Mintz and Morris show accounting students how a commitment to ethics can enable accounting professionals to meet their ethical obligations both to investors and creditors. No other book so comprehensively examines the elements of the financial reporting system - including the ethics of the internal control environment and the effectiveness of board of director and audit committee oversight - that determine the ethical standard of the accounting process.

Navigate the complexities of biochemical thermodynamics with Mathematica(r) Chemical reactions are studied under the constraints of constant temperature and constant pressure; biochemical reactions are studied under the additional constraints of pH and, perhaps, pMg or free concentrations of other metal ions. As more intensive variables are specified, more thermodynamic properties of a system are defined, and the equations that represent thermodynamic properties as a function of independent variables become more complicated. This sequel to Robert Alberty's popular Thermodynamics of Biochemical Reactions describes how researchers will find Mathematica(r) a simple and elegant tool, which makes it possible to perform complex calculations that would previously have been impractical. Biochemical Thermodynamics: Applications of Mathematica(r) provides a comprehensive and rigorous treatment of biochemical thermodynamics using Mathematica(r) to practically resolve thermodynamic issues. Topics covered include: * Thermodynamics of the dissociation of weak acids * Apparent equilibrium constants * Biochemical reactions at specified temperatures and various pHs * Uses of matrices in biochemical thermodynamics * Oxidoreductase, transferase, hydrolase, and lyase reactions * Reactions at 298.15K * Thermodynamics of the binding of ligands by proteins * Calorimetry of biochemical reactions Because Mathematica(r) allows the intermingling of text and calculations, this book has been written in Mathematica(r) and includes a CD-ROM containing the entire book along with

macros that help scientists and engineers solve their particular problems.
