A summary is presented of a research program aimed at the improvement of high-temperature strain gages of the electrical resistance type. Potential ceramic and metal components were evaluated and a gage was devised that was based on these evaluations. This gage (NBS 5B) was flexible and easy to install; however, it lacked resistance stability at higher temperatures. In an attempt to minimize this deficiency, ceramic cements were developed that showed greater electrical resistivity than had been previously observed in the range 800 to 1800 degrees Fahrenheit; also, a technique was devised for increasing the resistance to ground by applying a fired-on ceramic coating to the grid of a specifically developed unbacked gage. A study was made of the cause of the erratic response of cemented gages that had not been preheated prior to use. There were strong indications that the erratic response was caused mostly by the rapid decrease in resistance that accompanied structural changes in the cement.

In *This Flame Within* Manijeh Moradian revises conventional histories of Iranian migration to the United States as a post-1979 phenomenon characterized by the flight of pro-Shah Iranians from the Islamic Republic and recounts the experiences of Iranian foreign students who joined a global movement against US imperialism during the 1960s and 1970s. Drawing on archival evidence and in-depth interviews with members of the Iranian Students Association, Moradian traces what she calls “revolutionary affects”—the embodied force of affect generated by experiences of repression and resistance—from encounters with empire and dictatorship in Iran to joint organizing with other student activists in the United States. Moradian theorizes “affects of solidarity” that facilitated Iranian student participation in a wide range of antiracist and anticolonial movements and analyzes gendered manifestations of revolutionary affects within the emergence of Third World feminism. Arguing for a transnational feminist interpretation of the Iranian Student Association’s legacy, Moradian demonstrates how the recognition of multiple sources of oppression in the West and in Iran can reorient Iranian diasporic politics today.

In these two novellas, Kimura Y?suke explores human and animal life in northern Japan after the natural and nuclear disasters of March 11, 2011. Kimura inscribes the “Triple Disaster” into a rich regional tradition of storytelling, incorporating far-flung voices and experiences to testify to life and the desire to represent it in the aftermath of calamity. ? In *Sacred Cesium Ground*, a woman from Tokyo travels to volunteer at a cattle farm known as the “Fortress of Hope,” tending irradiated animals abandoned after the reactor meltdown. The farm closely resembles an actual ranch that has been widely covered in Japan, and the story’s portrayal of those who stubbornly care for animals in spite of the danger speaks to the sense of futility and meaningfulness in the wake of traumatic events. *Isa’s Deluge* depicts a family of fishermen whose crotchety patriarch draws on old tales of the floods that have plagued the region to fashion himself as the father of the tsunami. Together, the novellas present often-unheard voices of one of Japan’s peripheral regions and their

anger toward the government and Tokyo for mishandling and forgetting their part of the country. Kimura’s command of dialect and conversational language is masterfully translated by Doug Slaymaker.

Postapocalyptically surreal yet teeming with life, Kimura’s stories will be a revelation for readers looking for a new perspective on the disaster’s consequences for Japan and on the interrelated meanings of human and animal lives and deaths.

Resilience has become a central concept in government policy understandings over the last decade. In our complex, global and interconnected world, resilience appears to be the policy

‘ buzzword ’ of choice, alleged to be the solution to a wide and ever-growing range of policy issues. This book analyses the key aspects of resilience-thinking and highlights how resilience impacts upon traditional conceptions of governance. This concise and accessible book investigates how resilience-thinking adds new insights into how politics (both domestically and internationally) is understood to work and how problems are perceived and addressed; from educational training in schools to global ethics and from responses to shock events and natural disasters to long-term international policies to promote peace and development. This book also raises searching questions about how resilience-thinking influences the types of knowledge and understanding we value and challenges traditional conceptions of social and political processes. It sets forward a new and clear conceptualisation of resilience, of use to students, academics and policy-makers, emphasising the links between the rise of resilience and awareness of the complex nature of problems and policy-making.

It was our intention to organize IAIT 2010 as the place where researchers and ind- trial practitioners could share their work and achievements in information technology, both theoretical and in application. This is the fourth time we have organized IAIT to serve as a venue to foster collaboration among industry and academia from different parts of the world. A lot has been achieved since the launch of the first IAIT in 2005; however, many challenges remain to be addressed in the years to come. IAIT 2010 drew attendance from leading professionals in both industry and academes, as in IAIT 2009. In addition to the relevant program offered by IAIT 2010, the conference p- vided an excellent environment to meet peers in the IT profession, build relationships, and exchange lessons learned. During the conference, participants presented and d- cussed the latest topics in information technology, ranging from technical knowledge and experimentation to future strategic directions. As the Internet continues to reach out even further, almost everything in our daily life is accessible via IP addresses, our societies need to recognize that we need new knowledge to make this advancement become a benefit to all life in this world. It is almost impossible to gain this new knowledge without contributions from our c- leagues, working in various aspects of information technology. Some times, new knowledge found in one area can help simplify difficult task in another. Together we can make our world better by creating applications from information technology.
