In recent years there has been growing pressure for consistent product quality, and a need for companies to demonstrate sound quality management practices in order to meet 'Due Diligence' requirements of both legislation and the quality assurance practices of customers. It has become accepted that operating to the requirements of the international standard for quality management - BS EN ISO 9001 - goes a long way towards meeting these needs. The objective of this book is to explain the requirements of the standard, to offer advice about achieving those requirements and to indicate what the assessors will look for at assessment time. It is important that certification to the standard is sought to support achievement of company objectives and not the

reverse, and of course the standard can apply to organizations and services, just as much as to companies. Thus the word 'company' in the text should be treated accordingly. Illustrative material has been presented under the logo of a fictitious company 'Quality Food Services' - in this context QFS does not bear any relationship whatsoever to any identically or similarly named business that may exist. Readers will find it helpful to read the book with a copy of the standard to hand, and are strongly encouraged to read the complete text before taking any steps to prepare for certification to the standard.

This book explains the requirements for compliance with FDA regulations and ISO standards (9001/13485) for documented information controls, and presents a methodology for compliance. The document control system (DCS), or documented information control system (DICS), is the foundation of a quality management system. It is the first quality system element that must be implemented because the establishment and control of documented processes and information in a quality-controlled environment is dependent on the ability to proactively manage access to documents and the movement of documents through the document life cycle. A well-developed document control system benefits business by: Improving knowledge retention and knowledge transfer within and across business units Improving access to knowledge-based information Improving employee performance by providing standardized processes and communicating clear expectations Improving customer communication and satisfaction by providing documented information from which common understanding can be achieved Providing traceability of activities and documentation throughout the organization Improving organization of and access to documents and data Sample documents are included in the appendixes of this book to help clarify explanations, and a full set of formatted procedures and document templates are available for download to get you off to an even faster start. This book provides a process-based approach that can be used for controlling all forms of documented information that are required to be managed under the quality management system.

They're supposed to be useful tools, but whether they're printouts, computer files, flowcharts, or forms, documents can often give more headaches than help. And yet without them, most organizations couldn't function. ISO 9001 and other quality management systems place great emphasis on documents, and for good reason. Documents aren't individual, stand-alone elements of the management process. They're interrelated, formatted in different media, and controlled by various and distinct functions. Keeping critical information current and in the right hands requires more than just signing off on procedures. Document control is essential, but where should you begin? ISO 9001:2000 Audit Procedures John Wiley & Sons

The quality management system contained in this Book is probably the most complete ISO 9001:2015 compliant example of a generic Quality Management System (QMS) that can, with very little trouble, be suitably customised to suit all types of organisations - no matter whether they are manufacturers, suppliers or end users. Consisting of a Quality Manual (supported by the four main Quality Processes, 31 Quality Procedures and 16 Work Instructions) this QMS covers every element of the standard and is guaranteed to meet (and sometimes exceed) the requirements of ISO 9001:2015. This is an excellent resource for any small or medium sized business looking to work towards ISO certification, without having the expense of a consultant doing the work for you. CONTENTS For convenience, it is divided into four parts. User Instructions This section will not make up your completed QMS but provides background and context for the standard as well as instructions on how to customise the documents to suit your business, and ensure that you meet the requirements of the standard. It is advised that you read this document first before embarking on

customisation. Part 1 - The Quality Manual This describes the basic policies of an organisation's QMS and the processes that are required to implement them. It defines: * how an organisation can meet the requirements and recommendations of ISO 9001:2015; * how an organisation's QMS should be developed and implemented; * the associated documentation (e.g. Quality Processes, Quality Procedures and Work Instructions) that are required fulfil the requirements of the Quality Manual. Part 2 - Quality Procedures Quality Procedures (QPs) form the bulk of any QMS and describe how the policy objectives of the Quality Manual can be met in practice and how its processes are controlled. They contain the basic documentation used for planning and controlling all activities that impact on the quality of an organisation's products and services. Each QP is unique and conforms to the specific requirements contained in the ISO 9001:2015 standard (although, in reality, they often cover far more) and are an efficient method of controlling every aspect of an organisation's business. This Part of the Quality Manual consists of 31 separate QPs that not only cover common processes (such as Document Control, Internal Audits, Training, Health & Safety and Customer Satisfaction etc.) but also include the latest requirements for Risk Management & Improvement, Gap Analysis and Marketing. Part 3 - Work Instructions and Templates Part 3 consists of 16 Work Instructions (WIs) describing how to perform specific operations and have been produced cover all of the relevant activities of the QMS described in Parts 1 and 2 so as to ensure that everyone in your organisation can all work to the same format. WIs describe how individual tasks and activities are to be carried out and show, in detail, what is to be done, who should do it and when it has to be completed. They can, for example, cover simple issues such as making travel and hotel arrangements to more complex issues such as the structure of reports.
