This book takes a brand new look at the entire audit process for both auditors and auditees. No longer will

auditees need to feel like they must comply with an audiores checklist without understanding why compliance is helpful to, or necessary for, the

organization. Likewise, auditors will learn a fresh approach for developing feedback and reports that are more than lists of failings, but are value-added assessments of an organization's strengths and areas for improvement. By educating them as customers of the audit, this guide teaches auditees how to get the most value from their audit. Auditors will receive guidance about how to make their job something organizations will appreciate as a tool they can use to improve their company. This complete how-to guide will help auditors and organizations plan for their internal or external audit. OeHanlon himself is a registered IRCA Lead Auditor and Lead Auditor trainer who teaches you the previously undiscussed areas of the audit process. Additionally, this book will show both auditors and auditees how to make your audit a process that creates value for the organization, not just a tool to ensure compliance. Internal, second- and third-party auditors and auditees can use the numerous frequently asked questions to prepare for the situations they will encounter during an actual audit.

Using the Process Approach to Build a Quality Management System

In recent years there has been growing pressure for consistent product

quality, and a need for companies to demonstrate sound quality management practices in order to meet 'Due Diligence' requirements of both legislation and the quality assurance practices of customers. It has become accepted that operating to the requirements of the international standard for quality management - BS EN ISO 9001 - goes a long way towards meeting these needs. The objective of this book is to explain the requirements of the standard, to offer advice about achieving those requirements and to indicate what the assessors will look for at assessment time. It is important that certification to the standard is sought to support achievement of company objectives and not the reverse, and of course the standard can apply to organizations and services, just as much as to companies. Thus the word 'company' in the text should be

treated accordingly. Illustrative material has been presented under the logo of a fictitious company 'Quality Food Services' - in this context QFS does not bear any relationship whatsoever to any identically or similarly named business that may exist. Readers will find it

helpful to read the book with a copy of the standard to hand, and are strongly encouraged to read the complete text before taking any steps to prepare for certification to the standard.
