This book focuses on the management of ship operations, an activity that requires integrative knowledge and technical expertise that spans various disciplines. As such, ship operations

personnel are expected to be well-versed with aspects of management, economics, engineering, technology and law. Further, ship operations management requires the ability to identify and neutralize threats and to manage risks and make decisions that will optimize costs and contribute to performance improvements. Despite the fundamental nature of ship operations management, no book has ever attempted to reconcile and compile a comprehensive body of knowledge, while pursuing a coherent, structured and systematic approach. This edited volume addresses that fundamental gap in the extant literature, and brings together a wealth of knowledge from experts in their

---

respective fields. Concretely, it explores issues of organization, technical management, crewing and behavioral issues, chartering and post fixture, risk management, finance, legal aspects of international conventions and regulations, attainment of safety, security and marine insurance, as well as ocean governance and sustainability. As such, the book offers a vital reference guide for maritime companies and organizations, while also serving as a teaching supplement in academic and professional maritime programmes.

The first modern title to cover the varied and complex world of ship management in the 21st century. Ship management has constantly had to evolve to take into account the advancements in technology as well as the demands of the shipping industry. Having internet

access and email on board ship has meant that the ship manager has to possess certain sets of skills to function effectively in the post, including computer literacy. The emergence of large multi-national ship management companies has also changed how business is conducted, and this in turn means that the ship manager and tiers of management within the organization have had to evolve to cope with the demands of working with a multi-national workforce. Furthermore, since the mid-1980s there

---

has been an ever expanding raft of legislation that is more restrictive for companies to meet, and a shrinking of profit margins has seen a shift in how companies are required to operate to survive. This book addresses the demands of 21st century ship management with the focus of the book as much on the people who manage ships as on the theory and practice of ship management.

throughout the world; without these investments, the competitive position of ports and of the dependent logistics sector will deteriorate. National/regional governments and the local port authorities are no longer a guaranteed source of sufficient financial input to meet the continuous port infrastructure investment needs of the major ports. It is, therefore, increasingly crucial for ports to broaden their strategies and secure alternative streams of investment. This book provides expert insight into areas of port infrastructure finance across the main regions of Europe, Asia, Africa and the USA. Topics include how to estimate future demand by way of forecasting; Public-Private Partnerships; corporatisation; the pricing mechanisms for syndicated loans; European port privatisation; finance strategies for ports in Asia, the USA and Africa; and a discussion of the investment strategies available to the major port players. Port Infrastructure Finance is an invaluable book for all parties

TDD is based on a

simple idea: Write tests for your code before you write the code itself. However, this "simple" idea takes skill and judgment to do well. Now there's a practical guide to TDD that takes you beyond the basic concepts. Drawing on a decade of experience building real-world systems, two TDD pioneers show how to let tests guide your development and "grow"

software that is coherent, reliable, and maintainable. Steve Freeman and Nat Pryce describe the processes they use, the design principles they strive to achieve, and some of the tools that help them get the job done. Through an extended worked example, you'll learn how TDD works at multiple levels, using tests to drive the features and the object-

---

oriented structure of the code, and using Mock Objects to discover and then describe relationships between objects. Along the way, the book systematically addresses challenges that development teams encounter with TDD—from integrating TDD into your processes to testing your most difficult features. Coverage includes Implementing

TDD effectively: getting started, and maintaining your momentum throughout the project. Creating cleaner, more expressive, more sustainable code. Using tests to stay relentlessly focused on sustaining quality. Understanding how TDD, Mock Objects, and Object-Oriented Design come together in the context of a real software development

project Using Mock Objects to guide object-oriented designs. Succeeding where TDD is difficult: managing complex test data, and testing persistence and concurrency. *Port Infrastructure Finance* IMO Publishing. *The International Code of Safety for High-Speed Craft, 2000* (2000 HSC Code) applies to craft for which the

Indian Ocean. Indonesia's cooperation in maritime security initiatives is vitally important because half of the world's trading goods and oil pass through Indonesian waters, including the Straits of Malacca, the Strait of Sunda and the Strait of Lombok. This book analyses Indonesia's participation in international maritime security cooperation. Using Indonesia as a case study, the book adopts mixed methods to assess emerging power cooperation and non-cooperation drawing from various International Relations theories and the bureaucratic politics approach. It addresses not only the topic of Indonesia's cooperation but also engages in debates across the International Relations, political science and policy studies disciplines regarding state cooperation. Based on extensive primary Indonesian language sources and original interviews, the author offers a conceptual discussion on the reasons underlying emerging middle power participation or non-participation
