With clarity, warmth and humour, Schwarzman shows the beauty of a naval architect's drawings, and how the practical challenge of combining function, philosophy and aesthetics turns a plan into a boat.

This book offers a comprehensive and timely overview of internal combustion engines for use in marine environments. It reviews the development of modern four-stroke marine engines, gas and gas-diesel engines and low-speed two-stroke crosshead engines, describing their application areas and providing readers with a useful snapshot of their technical features, e.g. their dimensions, weights, cylinder arrangements, cylinder

capabilities, rotation speeds, and exhaust gas temperatures. For each marine engine, information is provided on the manufacturer, historical background, development and technical characteristics of the manufacturer's most popular models, and detailed drawings of the engine, depicting its main design features. This book offers a unique, self-contained reference guide for engineers and professionals involved in shipbuilding. At the same time, it is intended to support students at maritime academies and university students in naval architecture/marine engineering

with their design projects at both master and graduate levels, thus filling an important gap in the literature.

Traditionally, the study of internal combustion engines operation has focused on the steady-state performance.

However, the daily driving schedule of automotive and truck engines is inherently related to unsteady conditions. In fact, only a very small portion of a vehicle's operating pattern is true steady-state, e. g. , when cruising on a motorway. Moreover, the most critical conditions encountered by industrial or marine engines are met during

transients too. Unfortunately, the transient operation of turbocharged diesel engines has been associated with slow acceleration rate, hence poor driveability, and overshoot in particulate, gaseous and noise emissions. Despite the relatively large number of published papers, this very important subject has been treated in the past scarcely and only segmentally as regards reference books. Merely two chapters, one in the book *Turbocharging the Internal Combustion Engine* by N. Watson and M. S. Janota (McMillan Press, 1982) and another one written by D. E. Winterbone in the book *The Thermodynamics and Gas Dynamics of Internal Combustion*

*Engines, Vol. II* edited by J. H. Horlock and D. E. Winterbone (Clarendon Press, 1986) are dedicated to transient operation. Both books, now out of print, were published a long time ago. Then, it seems reasonable to try to expand on these pioneering works, taking into account the recent technological advances and particularly the global concern about environmental pollution, which has intensified the research on transient (diesel) engine operation, typically through the Transient Cycles certification of new vehicles.

In 1962, South Korea assembled just 1,100 new automobiles. By 1996, this total had soared to 2,812,714. What explains this remarkable growth? The answer is complex, and

involves a combination of a supportive State, timely technology alliances, a skilled but historically low-paid workforce, aggressive pricing, savvy entrepreneurs, and fortuitous circumstances. Despite this amazing ascent, comparatively little has been written about the Korean auto industry in English. In the first of a two-volume set, this 11-chapter book seeks to help fill this void by providing in-depth examinations of all six of Korea's automakers from their beginnings through 1996. ### *Annual Report*

This book provides a wealth of detailed information that collectors, investors, and restorers of imported cars will not find in

any other book. This massive volume spans the marques of imported vehicles. The list includes such familiar names as Alfa Romeo, Aston Martin, Bentley, Citroen, Jaguar, Lamborghini, Porsche, Rolls-Royce, Saab, and Volkswagon. Also in these pages, you'll find details on such lesser-known yet no less intriguing marques as Abarth, DAF, Frazer Nash, Humber, Iso, Nardi, Panhard, Peerless, Sabra and Skoda. The book also highlights model changes and corporate histories and provides value information on the most popular models of imported cars.

cleans toilets, too? Worst. Birthday. Ever. Cassidy Burke's dog ate her breakfast, then her ancient washing machine finally died. Oh, and Logan Miller is back. First love, baby daddy to her genius daughter (won't he be surprised?), still so handsome he makes her hoo-hah tingle. Which is exciting but confusing because she's also getting serious flirting vibes from her latest client, Devlin Cole – a tall, dark, walking, talking orgasm. So forgive her if she's not exactly thrilled when a strange old lady barges into her house and insists that Cass's

destiny is to hunt demons. A., she doesn't want to hunt demons, she wants to clean houses (and she doesn't really want to do that). And B., there's no such thing as demons. Except... they seem pretty real when they're coming after her. As if running a business and being a single mom wasn't enough, now she has to train to become a kick-ass Demon Duster, decide which hunk to do more than flirt with, and – oh, yeah – dodge the demons determined to kill her before she taps into her full power. All in a day's work...
