Fluids and Electrolytes: A 2-in-1 Reference for Nurses offers both a serious reference book to read and a collection of logically organized bullet points for a quick review. The wide inner column of each page contains narrative text so nurses can, for instance, carefully read about the pathophysiology underlying an imbalance or the signs associated with the imbalance. The narrow outer column lists the corresponding summaries, better to rapidly review the key pathophysiologic events or key signs and symptoms. Full-color inserts enhance the content by bringing to life trademark ECG findings associated with two critical electrolytes, potassium and calcium, and their impact on myocardial function.

Background and Aims:Practice of prescribing IV fluids in hospitals is invariably left to most junior doctors. Only 16 % of surgical consultants feel that junior doctors are appropriately educated in regard to IV fluid prescribing. NICE in december 2013 introduced a guideline for intravenous fluid therapy which was later updated as well.**Methods:**We audited the practice of prescribing IV fluids in our hospital against the 10 standards of NICE guideline. We randomly selected 40 adult inpatients (20 medical and 20 surgical) who were on intravenous fluid therapy for atleast 24 hours. Medical and nursing notes and prescription charts were assessed as to their compliance with audit standards.**Results**The compliance of IV fluid therapy was found to be very poorly compliant with NICE guideline. Only 29 % of 10 standards were found to be >90 %. Few recommendations were made based on the results. We decided to develop new IV fluid policy for our hospital. We planned to put together teaching sessions for junior doctors and nursing staffs. We decided to develop more user friendly IV fluid chart integrated with current drug chart. All IV fluids need to be infused via pump. We developed a task team to implement all these recommedations. After a series of meeting including Anaesthetist, medical team, nurses and pharmacy, we managed to accomplish all action plan.**Conclusions:**Intravenous fluid therapy is very important part of treatment of patients in hospital. Auditing the practice of IV fluid therapy helps in improving the standards.
