From Chinese apples to Italian zucchini, this book presents an unexpected tour of the world. Starting from a fruit wholesaler in Northern Italy, Carlo Valsecchi embarked on a photographic journey that led him to catalogue over 160 varieties of fruit and vegetables. his straight and objective photographs offer an abstract yet colorful glimpse into a fascinating and tasty world. This encyclopedic series of pictures is also a reflection on globalization, its effects on the circulation of goods, our diet and lifestyle. This book will appeal to gourmands and conceptual art buffs alike. Text in English and Italian. Abitare NYU Press

Have you ever heard about AirBnB but aren't sure how to get started? Or are you an AirBnB host already looking for ways to

maximize your bookings, increase your AirBnB ranking, and reduce the amount of time you spend working on your listing? Then you have come to the right place!AirBnB is a very flexible platform, and it can work for a variety of situations. Do you have a spare room in your house or apartment? It could even be your living room, a trailer, a boat, or an igloo (there was a very popular igloo in Boston last winter), there are very few limits as to what you can rent out on Airbnb. Or maybe you want to go to the next level and rent out your entire home or apartment on AirBnB while you travel or live elsewhere? Then we have a blueprint to get you started and show you exactly what to do.This book will help the complete novice and experienced AirBnB host alike, as there are tips for

students at every level. I walk you through everything you need to know about renting out your spare room or your entire apartment on AirBnB. Not only do we cover every single piece of the AirBnB puzzle in detail, we also provide links to FREE "Swipe" files with things like all the messages I send to my guests, the spreadsheet I use to analyze my competition, the rental contract I use, and an advanced spreadsheet to look at new properties to see if Airbnb will make a profit! These plus other trade secrets that have helped me run my successful AirBnB business. My Swipe files alone are worth the price of the book, and can save you tons of time, simply take what I wrote already and copy and paste! This material that has already proven to work, just insert a few minor details like your address and phone number, and you instantly have a head start. Learn all my AirBnB Tips and Tricks, and you can beat 99% of other AirBnB hosts in your market to be the top ranking and grossing host. In this book you will get detailed, easy to follow blueprints that cover:

- A step by step guide of how I grew my AirBnB business from \$0 a month all the way to \$7500 a month!
- All the work that needs to be done before you list your unit so that you can build a proper foundation
- How to analyze your competition and make a plan to beat them!
- How to determine the exact right amount to charge per night in your area.
- Recognize the steps to hit the ground running as soon as you launch your listing.
- How to craft the perfect listing, take the best photographs,

write a catchy title, engaging listing description, and more!- How to supercharge your listing and get to the top of AirBnB's listing results for your area.- How to setup your AirBnB listing so it's on "autopilot" and requires virtually no work from you, only a few minutes a week oversight!Plus, you can join our private facebook discussion group and network with other hosts and your peers! The AirbnB Profit Blueprint is a proven system that will benefit hosts of every level

Revised and expanded!Reading the Tarot is a complex and mysterious art. The seventy-eight cards that comprise the traditional Tarot deck are full of archetypal symbolism that can help anyone to connect to the universal subconscious.That Tarot can be used to reveal information hidden deep within your own subconscious. This book

discusses each of the seventy-eight cards in depth, addressing their possible interpretations based upon the symbolism of the standard Rider-Waite deck. These interpretations can be applied to most other traditional decks as well. In addition to card descriptions, "Tarot Deciphered" provides ten different spreads that can be used with most Tarot decks. These spreads range from the common Celtic Cross Spread to the complex Astrological Spread. Also included is the Healing Spread, a tool which can be used to aid psychological healing. This book is perfect for both the novice and experienced reader. It contains all the information you need to further your exploration of the Tarot.

This is a brilliant examination of the complex processes of the post-1990 transformation in the Czech automotive industry and its selective integration into the West European system. The post-1990 restructuring of the industry is analyzed in the context of its pre-1990 development and in the context of the East European automobile industry as a whole. Specifically, the book examines the development and post-1990 restructuring of the Czech car, components, and truck industries.

Focusing on the most rapidly changing areas of mechatronics, this book discusses signals and system control, mechatronic products, metrology and nanometrology, automatic control & robotics, biomedical engineering, photonics, design manufacturing and testing of

MEMS. It is reflected in the list of contributors, including an international group of 302 leading researchers representing 12 countries. The book is intended for use in academic, government and industry R&D departments, as an indispensable reference tool for the years to come. This volume can serve a global community as the definitive reference source in Mechatronics. The book comprises carefully selected 93 contributions presented at the 11th International Conference Mechatronics 2015, organized by Faculty of Mechatronics, Warsaw University of Technology, on September 21-23, in Warsaw, Poland.

Internal combustion engines still have a potential for substantial improvements, particularly with regard to fuel efficiency and environmental compatibility. These goals can be achieved with help of control systems.

Modeling and Control of Internal Combustion Engines (ICE) addresses these issues by offering an introduction to cost-effective model-based control system design for ICE. The primary emphasis is put on the ICE and its auxiliary devices. Mathematical models for these processes are developed in the text and selected feedforward and feedback control problems are discussed. The appendix contains a summary of the most important controller analysis and design methods, and a case study that analyzes a simplified idle-speed control problem. The book is written for students interested in the design of classical and novel ICE control systems.

Introduction to Modeling and Control of Internal Combustion Engine Systems

Springer Science & Business Media

Im Buch ist die Entwicklung der Emissionen aus der Verbrennung von Biokraftstoffen über einen Zeitraum von 15 Jahren beschrieben. Dazu wurden am Thünen-Institut für Agrartechnologie in Braunschweig limitierte und nicht limitierte Emissionen an sechs verschiedenen Dieselmotoren bestimmt, die in verschiedenen Abgasklassen bis Euro IV eingestuft waren. Dabei wurden hauptsächlich Motoren untersucht, die in Nutzfahrzeugen oder in landwirtschaftlichen Maschinen Verwendung finden. Als prominentester biogener Kraftstoff wurde Biodiesel aus Raps mit fossilem Dieselkraftstoff bei allen Versuchsreihen verglichen. Daneben wurden reines Pflanzenöl, hydriertes Pflanzenöl und

Fischer-Tropsch-Kraftstoffe sowohl in Reinkraftform als auch in Mischung mit Dieseldieselkraftstoff untersucht. Im Laufe der Jahre musste die Analysentechnik kontinuierlich an die immer sauberen Verbrennungsabgase angepasst werden. Probenahme und Messtechnik sind beispielhaft in dieser Arbeit beschrieben.

The Private Journal and Literary Remains of John Byrom, Volume 2; Sources and Composition of Ambient Particulate Matter Draws on the author's experiences as an ambassador to Hungary during the declining years of János Kádár's communist regime to present a rich chronicle of the country's political, economic and cultural development over 1,100 years, from the arrival of the Magyars in the ninth century to the acceptance of Hungary into NATO and the European

Union.

A Step-by-Step Guide to Building Your Dream Hot Rod Inside and Out! Get revved up! Everything you need to know about building your dream hot rod is inside this book. You now have at your disposal the basic automotive techniques and tools necessary to install any modification to your

car. Here's the fastest and easiest way to get started! Do-It-Yourself High-Performance Car Mods is designed to help you modify cars and light trucks for improved performance. While there are many books on individual systems on a car, this practical step-by-step guide provides you with a thorough working knowledge of ALL the systems in a single resource. Automotive journalist and experienced engineer Matt Cramer has created an invaluable reference for readers regardless of age or experience. Whether you're a hobbyist new to the world of performance cars or a veteran car enthusiast looking to take the next step, you will become better equipped to drive off in the car of your dreams. There's never been a simpler, more practical approach to

modifying cars and light trucks, so you can do-it-yourself--and ultimately end up in the winner's circle! Do-It-Yourself High-Performance Car Mods includes valuable information on: How car systems work Simple ways to improve performance Getting more power out of your engine How to find reliable sources Separating marketing hype from reality Adjusting the engine components and controls for best performance How improving one area may impede another

This book provides a detailed overview of aspects related to the overall provision

chain for biokerosene as part of the global civil aviation business. Starting with a review of the current market situation for aviation fuels and airplanes and their demands, it then presents in-depth descriptions of classical and especially new types of non-edible biomass feedstock suitable for biokerosene provision.

Subsequent chapters discuss those fuel provision processes that are already available and those still under development based on various biomass feedstock materials, and present e.g. an overview of the current state of the art in the production of a liquid biomass-based fuel fulfilling the specifications for kerosene. Further, given the growing interest of the aviation industry and airlines in biofuels for aviation, the

experiences of an air-carrier are presented. In closing, the book provides a market outlook for biokerosene. Addressing a broad range of aspects related to the pros and cons of biokerosene as a renewable fuel for aviation, the book offers a unique resource.

Research related to ambient particulate matter
(PM) remains very relevant today due to the
adverse effects that PM have on human health.
PM are pollutants with varying chemical
compositions and may originate from multiple
emission sources, which directly affects their
toxicity. To formulate effective control and
mitigation strategies, it is necessary to identify
PM sources and to estimate their influence on
ambient PM concentration, a process that is
known as source apportionment (SA).
Depending on the geographical location and
characteristics of an area, many anthropogenic
and natural sources may contribute to PM
concentration levels, such as dust resuspension,
sea salt, traffic, secondary aerosol formation,

industrial emissions, ship emissions, biomass burning, power plant emissions, etc. Different methodological approaches have been used over the years to study the aforementioned topics, but some scientific challenges remain, mainly related to the following subjects: real-time chemical analysis and SA, uncertainty estimation of SA results, and analytical optimization for PM samples. Additionally, there are areas in the world for which the results regarding composition and sources of PM are still scarce. The objective of this collection was to include studies on all aspects of PM chemical characterization and source apportionment regarding the inorganic and/or organic fractions of PM.

Mine-protected and mine-resistant, ambush-protected (MRAP) vehicles are today standard in

the US, most major western armed forces and many other armies as a result of the wars in Iraq and Afghanistan. The South African Army was already routinely using mine-protected armored personnel carriers and patrol vehicles forty years ago even if they looked primitive and ungainly. A few years later, the South African Army had reached the stage where it could deploy entire combat groups into battle zones equipped with only mine-protected vehicles, including their ambulances and supply trucks. By then the mine-protected vehicles had also become effective for use in combat, rather than just protected transport, the Casspir being the chief example. More to the point, they saved countless soldiers and policemen from death or serious injury, and the basic concepts now live on in the various MRAP types in service today. The valuable lessons learned by the South Africans with their early designs of these combat-proven vehicles has led the country to become one of the global leaders in the design of MRAPs which are locally manufactured

and exported around the world. Surviving the Ride is a fascinating pictorial account featuring more than 120 of these unique South African-developed vehicles, spanning a forty-year period, with over 280 photographs, many of which are previously unpublished.
