The emergence of satellite technology has changed the lives of millions of people. In particular, GPS has brought an unprecedented level of accuracy to the field of geodesy. This text is a guide to the algorithms and mathematical principles that account for the success of GPS technology and replaces the authors' previous work, *Linear Algebra, Geodesy, and GPS* (1997). An initial discussion of the basic concepts, characteristics and technical aspects of different satellite systems is followed by the necessary mathematical content which is presented in a detailed and self-contained fashion. At the heart of the matter are the positioning algorithms on which GPS technology relies, the discussion of which will affirm the mathematical contents of the previous chapters. Numerous ready-to-use MATLAB codes are included for the reader. This comprehensive guide will be invaluable for engineers and academic researchers who wish to master the theory and practical application of GPS technology.

This classic text, the last major work by the great Hebrew Bible scholar Gerhard von Rad, has long been unavailable in North America. It is now being reissued in paperback from to satisfy the continuing demand for copies of the book. In brief, the subject of von Rad's study of Hebrew wisdom is Israel's willingness to ground faith in encounter with the world as the creation of God. Those familiar with the author's Old Testament Theology will recall how he identified two great watersheds in the history of Israel's thought. The first was the rise of the prophetic movement, which occasioned a radical reinterpretation of Israel's religious traditions as expressed in the earliest creedal formulations found in the Pentateuch. The second watershed, which preceded the prophetic movement and was a basically different assessment of Israel's relation to Yahweh, was achieved by wisdom teachers at the start of the monarchy. This book studies this first and somewhat novel break with Israel's older sacral traditions. Von Rad bases the study on a wide range of literary materials principally concerned with the books of Proverbs, Job, Ecclesiastes, and the Wisdom of Ben Sirach. "No finer introduction to the fundamental theological questions raised by the wisdom literature of Israel is available." Theology Today Gerhard von Rad was for many years Professor of Old Testament at the University of Heidelberg.

He is known chiefly for his brilliant lyric poems, including "The Garden," "The Definition of Love," "Bermudas," "To His Coy Mistress," and the "Horatian Ode" to Cromwell. Marvell's work is marked by extraordinary variety, ranging from incomparable lyric explorations of the inner life to satiric poems on the famous men and important issues of his time—one of the most politically volatile epochs in England's history. From the lover's famous admonition, "Had we but World enough, and Time, / This coyness, Lady, were no crime," to the image of the solitary poet "Annihilating all that's made / To a green Thought in a green Shade," Marvell's poetry has earned a permanent place in the canon and in the hearts of poetry lovers.

This is the fascinating story of a group of reformers who tried to go too fast, bungled their reform, and so changed the course of history. Hengel's thesis is that Hellenistic influences were, and had been for centuries, smoothly penetrating Judaism even in Jerusalem; there was respect on both sides between Jew and Greek. Then the Greek party tried to go too fast, make Hellenization obligatory and outlaw the Law. This occasioned a furious defensive reaction; Judaism clammed up, became xenophobic and rigoristic, producing the attitude which in its turn created the defensive reaction of anti-Semitism which has stained so many centuries. The defensive rigidity set up in Judaism made it unable to respond to Jesus' creative reinterpretation of the Law, and so led to the rejection of Christianity. This is a truly important scholarly work. The exhaustive collection of evidence will make it a fundamental textbook for the period' (The Tablet). 'A foundation book and essential as a source book and as a guide to trends in present research' (The Expository Times). Martin Hengel was Professor of New Testament and Early Judaism in the University of Tübingen.

Kate Winter teaches dog owners how to train their canine companions. During her spare time, accompanied by her Lab, Dakota, she explores the woods and beaches on foot or horseback. She's worried that something's happening in her relationship, but she can't get her girlfriend Trish to talk to her about it. Faith Hutchins recently lost her sight after a terrible outdoor accident. She's dealt with her anger, depression, and blindness primarily on her own. A seeing-eye dog would help alleviate her reliance on anyone else, but the guide dog school has been unsuccessful in providing her with one. On a mission to find someone who will train a dog specifically for her, she ultimately zeroes in on Kate. They say lightning never strikes the same place twice. But positive lightning is notoriously unpredictable and can ignite a fire when and where least expected . . . no matter who's in its path."

The LNCS journal Transactions on Rough Sets is devoted to the entire spectrum of rough sets related issues, from logical and mathematical foundations, through all aspects of rough set theory and its applications, such as data mining, knowledge discovery, and intelligent information processing, to relations between rough sets and other approaches to uncertainty, vagueness, and incompleteness, such as fuzzy sets and theory of evidence. Volume XV offers a number of research streams that have grown out of the seminal work by Zdzislaw Pawlak. The 4 contributions included in this volume presents a rough set approach in machine learning; the introduction of multi-valued near set theory; the advent of a complete system that supports a rough-near set approach to digital image analysis; and an exhaustive study of the mathematics of vagueness.
