During next century they may perform other mutations to become optical or molecular or even biological. Actually, all these aspects are only fancy dresses put on mathematical machines. This was always recognized to be true in the domain of software, where "machine" or "high level" languages are more or less rigorous, but immaterial, variations of the universally accepted mathematical language aimed at specifying elementary operations, functions, algorithms and processes. But even a mathematical machine needs a physical support, and this is what hardware is all about. The invention of hardware description languages (HDL's) in the early 60's, was an attempt to stay longer at an abstract level in the design process and to push the stage of physical implementation up to the moment when no more technology independent decisions can be taken. It was also an answer to the continuous, exponential growth of complexity of systems to be designed. This problem is common to hardware and software and may explain why the syntax of hardware description languages has followed, with a reasonable delay of ten years, the evolution of the programming languages: at the end of the 60's they were "Algol like", a decade later "Pascal like" and now they are "C or ADA-like". They have also integrated the new concepts of advanced software specification languages.

C.F. Keil was a scholar strongly committed to confessional theology. His dogmatic-confessional approach is particularly evident in his approach to the Pentateuch. He strongly supported Mosaic authorship of the Pentateuch and rejected attempts to explain extraordinary events in the history of Israel as anything but miraculous, divine intervention. Keil showed much interest in the historical development of divine revelation. Viewing the prophets as persons who were able to perceive future trajectories of God's saving acts, he presented history and revelation as interdependent rather than fundamentally dissimilar. Prophetic predictions then find their fulfillment in the historical person of Christ. This introduction to the Old Testament reveals Keil's foundational presuppositions - presuppositions which shaped his contribution to the well-known and influential Keil-Delitzsch 'Biblical Commentary', which includes Keil's commentaries on all the books from

Genesis to Esther, Jeremiah, Ezekiel, Daniel, and the Minor Prophets.
