In Mortal Combat iUniverse
A history of the Korean War
with soldier's-eye views from
both sides, by the Pulitzer
Prize-winning author of The

Rising Sun and Infamy. Pulitzer Prize-winning author John Toland reports on the Korean War in a revolutionary way in this thoroughly researched and riveting book. Toland pored over military archives and was the first person to gain access to previously undisclosed Chinese records, which allowed him to investigate Chairman Mao's direct involvement in the conflict. Toland supplements his captivating history with in-depth interviews with more than two hundred American soldiers, as well as North Korean, South Korean, and Chinese combatants, plus

dozens of poignant photographs, bringing those who fought to vivid life and honoring the memory of those lost. In *Mortal Combat* is comprehensive in its discussion of events deemed controversial, such as American brutality against Korean civilians and allegations of American use of biological warfare. Toland tells the dramatic account of the Korean War from start to finish, from the appalling experience of its POWs to Mao's prediction of MacArthur's Inchon invasion. Toland's account of the "forgotten war" is a must-read for any history aficionado.

The novel is written in the first person, fiction based on the author's experience as a shipping fraud and casualty investigator for the insurance world. It takes the reader behind the scenes to tell the real story. You enter a world of natural and man-made catastrophes. Experience what it's like to be trapped on a burning tanker loaded with 400,000 tons of highly inflammable crude oil. What happens when a ship runs aground in thick fog. Imagine when lights failed, the ship in danger of breaking up. Experience being aboard a ferry carrying sheep across the Bass Straits when it capsizes. Swept up into the bows

by an avalanche of water flooding in through the stern door with the ship going full astern. Trapped in a steel coffin in darkness surrounded by dying sheep. In danger of suffocating as the bubble of air is slowly depleted of oxygen as the sheep gasp for breath. Abandoning hope of survival, then elated as divers appear to your rescue. Then there's maritime crime. All that's needed is a rusty-hull destined for the breaker's yard. Insure a non-existent cargo for an outrageous sum, and then scuttle it at sea. The claim for millions of dollars for the loss of the cargo will be viewed with suspicion by insurers. Jim Stewart, the character in the book, meets many unique characters, in often tragi-comic situations. This is the

first of three novels by J.R.Euen..

LITERATURE."

--DEUTSCHLANDRADIO KULTUR Hypnotically lyrical and intensely moving, Steven Uhly's epic novel set in the wake of World War II is a finely nuanced yet shattering exploration of universal themes: love, hatred, doubt, survival, guilt, humanity, and redemption. One night in autumn 1944, a gunshot echoes through the alleyways of a small town in occupied Poland. An SS officer is shot dead by a young Polish Jew, Margarita Ejenstain. In retaliation, his commander orders the

execution of thirty-seven Poles--one for every year of the dead man's life. First hidden by a sympathetic German couple, Margarita must then flee the brutal advance of the Soviet army with her newborn baby. So begins a thrilling panorama of intermingled destinies and events that reverberate from that single act of defiance. Kingdom of Twilight follows the lives of Jewish refugees and a German family resettled from Bukovina, as well as a former SS officer, chronicling the geographical and psychological

dislocation generated by war. A quest for identity and truth takes them from refugee camps to Lübeck, Berlin, Tel Aviv, and New York, as they try to make sense of a changed world, and of their place in it. America, Incorporated Contemporary Singapore is simultaneously a small postcolonial multicultural nation state and a cosmopolitan global city. To manage fundamental contradictions, the state takes the lead in authoring the national narrative. This is partly an internal process of nation building, but it is also achieved through more commercially motivated and outward facing efforts at nation and city branding. Both sets of processes

contribute to Singapore's capacity to influence foreign affairs, if only for national self-preservation. For a small state with resource limitations, this is mainly through the exercise of smart power, or the ability to strategically combine soft and hard power resources. Radelaide e-artnow sro In How to Build Hot Rod Chassis, highly regarded hot rodding author Jeff Tann covers everything enthusiasts need to know about

designing and building their new chassis and suspension system. It thoroughly explores both factory and aftermarket frames, modified factory solid-axle suspensions, and aftermarket independent front and rear suspension setups. No matter what design a reader may be considering for his own car, How to Build Hot Rod Chassis delivers a wealth of information on the pros and cons of all

systems available.

To most people, cars are just appliances to be disposed of when they rust, become unreliable, or are outgrown. But to car

people, it's different. Cars are like photographs that occupy physical space. They hold aromas that trigger memories, and remind us of who we once were. In addition, to some people, the relationship with the car itself is a real thing. Many enthusiasts pine for the cars of their youth, regret that they ever let them go, and yearn and search for them the way people do with old lovers, hoping to find them and rekindle that old spark. In Resurrecting Bertha, Rob Siegel assures you that this is normal (well, as normal as anything is with car

people), and embarks on this journey himself. Writing in his trademark Hack Mechanic voice that's enthralled readers for 35 years, Rob describes his original eight-year relationship with his highly-modified 1975 BMW 2002 "Bertha," selling the car to a dear friend, its 26 years of storage, and buying it back in a weak whisky-soaked moment only to experience the "oh dear God what did I just do" regret when he raises the long-closed garage door and comes face-to-face with the badly deteriorated car. The book details the steps Rob went

through to get the car running, then driving, then sufficiently sorted to make a 2000-mile drive, and how the reconnection with the car was so much deeper than he expected.

Resurrecting Bertha is about more than just the nuts and bolts; it's about deciding what's important, the joy of doing good, and how, if you do it right, not only can you go home again, but you can do so in the same car.

The goal of this book is

to provide an introduction to the practical use of mobile NMR at a level as basic as the operation of a smart phone. Each description follows the same didactic pattern: introduction, basic theory, pulse sequences and parameters, beginners-level measurements, advanced-level measurements, and data processing. Nuclear Magnetic Resonance (NMR) spectroscopy is the most popular method for chemists to analyze molecular structures

while Magnetic Resonance Imaging (MRI) is a non-invasive diagnostic tool for medical doctors that provides high-contrast images of biological tissue depicting the brain function and the beating heart. In both applications large super-conducting magnets are employed which magnetize atomic nuclei of an object positioned inside the magnet. Their circulating motion is interrogated by radio-frequency waves. Depending on the operating mode, the

frequency spectrum provides the chemist with molecular information, the medical doctor with anatomic images, while the materials scientist is interested in NMR relaxation parameters, which scale with material properties and determine the contrast in magnetic resonance images. Recent advances in magnet technology led to a variety of small permanent magnets, by which NMR spectra, images, and relaxation parameters can be

measured with mobile and low-cost instruments. Resurrecting Bertha MacLehose Press Completely revised and updated, Hillier's famous text is now available as three separate volumes. Book 2 concentrates on Powertrain management systems: Engine management (petrol and diesel) and transmission management (manual and automatic). All the associated fundamental information on sensors actuators and electronic control systems is

included, as well as more advanced material. The information builds up from basic control systems to those linked by multiplexing. The Hunt for the Holy Grail CarTech Inc Highlighting more than a decade of research, this one-of-a-kind reference reviews the production, processing, and characteristics of a wide range of materials utilized in the modern tire and rubber industry.
