The New South Wales Industrial Gazette Butterworth-Heinemann Crane Handbook offers extensive advice on how to properly handle a crane. The handbook highlights various safety requirements and rules. The aim of the book is to improve the readers' crane operating skills, which could eventually make the book a standard working guide for training operators. The handbook first reminds the readers that the machine should be carefully tested by a regulatory board before use. The text then notes that choosing the right crane for a particular job is vital and explains why this is the case. It then discusses how well-equipped and durable the crane should be. The next chapters talk about the crane's operating controls; each control is identified and explained. The book lists the requirements that the crane must meet, while the final chapters explore proper set-up, maintenance, and precautions. The text is a very helpful reference for crane operators, owners, and contractors and could be of interest to casual readers as well.

Senator Ted Kennedy said, "My father worked here. The Fore River Shipyard will once again be a symbol of our leadership. And I will do all I can to insure that this leadership continues to thrive. The shipbuilding industry has been struggling in this country as a whole. Employment has dropped to a 40 year low. American-built ships carry less than one percent of world trade. That is unacceptable." Senator John McCain said, "We have an obligation to protect the taxpayers' dollars by ensuring that this is a viable project. It is my desire that the Quincy shipyard, into which the state of Massachusetts and the city of Quincy have invested significant resources, will be a successful venture." President Clinton said about shipbuilding and the Quincy yard in particular, "Shipbuilding is one of the keys to America's national

defense and helping our shipbuilders succeed commercially is an important goal of defense conversion. This administration is committed to preserving highly skilled American jobs and we believe that American shipbuilding can compete and win in world markets." What happened ? SHIPBUILDING USED TO BE ONE OF THE TOP FIVE INDUSTRIES IN THE U.S.A.

THE SHIPYARD

When planes crash, bridges collapse, and automobile gas tanks explode, we are quick to blame poor design. But Henry Petroski says we must look beyond design for causes and corrections. Known for his masterly explanations of engineering successes and failures, Petroski here takes his analysis a step further, to consider the larger context in which accidents occur. In To Forgive Design he surveys some of the most infamous failures of our time, from the 2007 Minneapolis bridge collapse and the toppling of a massive Shanghai apartment building in 2009 to Boston's prolonged Big Dig and the 2010 Gulf oil spill. These avoidable disasters reveal the interdependency of people and machines within systems whose complex behavior was undreamt of by their designers, until it was too late. Petroski shows that even the simplest technology is embedded in cultural and socioeconomic constraints, complications, and contradictions. Failure to imagine the possibility of failure is the most profound mistake engineers can make. Software developers realized this early on and looked outside their young field, to structural

engineering, as they sought a historical perspective to help them identify their own potential mistakes. By explaining the interconnectedness of technology and culture and the dangers that can emerge from complexity, Petroski demonstrates that we would all do well to follow their lead.
