The aim of this book is to support industry in their effort to design environmentally friendly products. The book comprises a method and a manual for life cycle assessment of products and it includes examples

companies have used the method successfully in the design of more environmentally friendly products. The method has been developed over a period of four years under the Danish EDIP programme (Environmental Design of Industrial Products) by a team representing the Technical University of Denmark, five Danish industrial companies, the Confederation of Danish Industries and the Danish Environmental Protection Agency. The method is coherent and operational and it is

well documented by a large variety of examples including five different complex electromechanical products. It guides the user through the inventory and assessment of environmental impacts of products and shows how various products and design solutions during product development can be compared. The method is supported by a base of data for the assessments of environmental impacts and is thus designed as a tool which will make it possible for the user to start on life cycle assessment at once. The book also guides the user

through the identification of environmental improvement potentials in the product and the setting of environmental specifications with in the general concept of overall commercial optimization. The partnership between industry, authorities and university has been highly fruitful. *Carranza's Clinical Periodontology* Springer Science & Business Media This book provides a comprehensive overview of the different water-associated infectious diseases

and their linked pathogens with plausible strategies for their mitigation. Although, we are in the era of 21st century having most of the advanced technologies at hand, yet water-associated infectious diseases are the major contributors towards the worldwide morbidity and mortality. The book also focuses on the various implementation strategies of sustainable hygienic conditions, discusses the

robust, and reliable policies and strategies on a global aspect to provide unprivileged people access to the basic sanitation, hygiene and water. In addition, the book discusses the possible indirect effect of global warming on the spread of infectious diseases through the distribution of associated vectors. The authors outline a systematic approach to the clinical detection, evaluation and amelioration of individuals who exhibit binaural interference. Suggestions are furnished on improved techniques for evaluation of the binaural advantage in general and on sensitized detection of the disorder in particular. The book ends with recommendations for future directions. Given the adverse impact of binaural interference on auditory function and its occurrence in a significant subset of the population with hearing loss, as well as in some individuals with normal-hearing sensitivity, research on binaural interference only recently has begun to flourish, and adaptation of audiologic clinical practice to identify, assess, and manage individuals with binaural interference has yet to become widespread. The authors intend for the book to provide impetus for pursuing further research and to encourage audiologists to explore the possibility of binaural interference when patient complaints suggest it and when performing audiologic evaluations. The book is intended for practicing clinical audiologists, audiology students, and hearing scientists.

Refugees and their protection have started to be a part of daily conversation in recent years. New flows from Africa to Europe, new crisis in Asia and in the Americas, and record numbers since the Second World War, for instance, have paved the way for news reports in the media, political discourses on the topic and debates on how to actually

<p>protect these persons. In a world scenario of increasingly (i) closed borders, (ii) association of migration to security issues, (iii) lack of political will to ascertain human rights and (iv) disregard for migration as a right in se, the challenges on and for refugees' protection have been progressing; as have the need for international protection of persons fleeing well-founded fear of persecution due to their race, religion, nationality, political opinion or membership to a social group, i.e. refugees. Regional approaches and</p>	<p>national practices gain relevance, especially if they can be seen as good practices, even if not without flaws. "What are the main challenges and opportunities regarding Refugee Protection in Latin America and in Brazil? The book offers a very convincing response. The author is certainly one of the most influential scholars in Brazil working in the Forced Migration</p>	<p>field, and the essays provide a comprehensive view of Refugee Protection in Brazil and Latin America". – Gabriel Gualano de Godoy, PhD, UNHCR Chief of Mission in the Dominican Republic and former Head of UNHCR Protection Unit in Brazil. alerts, invasion, drone war, rampant surveillance: all manifestations of the type of new power Brian Massumi theorizes in Ontopower.  
Through an in-depth examination of the War on Terror and the culture of crisis, Massumi identifies the emergence of preemption, which he characterizes as the operative logic of our time. Security threats, regardless of the existence of credible intelligence, are now felt into reality. Whereas nations once waited for a clear and present danger to emerge before using force, a threat's felt reality now demands

<p>launching a preemptive strike. Power refocuses on what may emerge, as that potential presents itself to feeling. This affective logic of potential washes back from the war front to become the dominant mode of power on the home front as well. This is ontopower—the mode of power embodying the logic of preemption across the full spectrum of force, from the “hard” (military intervention) to the “soft” (surveillance). With Ontopower, Massumi provides an original theory of power that explains not only current practices of war but</p>	<p>the culture of insecurity permeating our contemporary neoliberal condition. <i>Clinical Facial Analysis</i> Pmph Bc Decker First published in 1964, Ruth Harrison's book <i>Animal Machines</i> had a profound and lasting impact on world agriculture, public opinion and the quality of life of millions of farmed animals. Concerned with welfare standards at a time when animal production was increasing in scale and mechanization, Ruth Harrison set about investigating the situation in a fair and even-handed way.</p>	<p>Reporting her findings in this book, Harrison alerted the public to the undeniable suffering of calves living in veal crates and birds in battery cages. This book analyses the dynamics of regional migration governance and accounts for why, how and with what effects states cooperate with each other in diverse forms of regional grouping on aspects of international migration,

displacement and mobility. The book develops a framework for analysis of comparative regional migration governance to support a distinct and truly global approach accounting for developments in Africa, Asia-Pacific, Central Asia, Europe, the Middle East, North America and South America and the many and varying forms that regional arrangements can take in these regions.
