The belief that men and women have fundamentally distinct natures, resulting in divergent preferences and behaviours, is widespread. Recently, economists have also engaged in the search for gender differences, with a number claiming to find fundamental gender differences regarding risk-taking, altruism, and competition. In particular, the idea that "women are more risk-averse than men" has become accepted as a truism. But is it true? And what are its causes and consequences? Gender and Risk Taking makes three contributions. First, it asks whether the belief that men and women have distinct risk preferences is backed up by high quality empirical evidence. The answer turns out to be "no." This leads to a second question: Why, then, does so much of the literature claim to find evidence of "difference"? This, it will be shown, can be attributed to biases arising from too-easy categorical thinking, widespread stereotyping, and a tendency to prefer results that are publishable and that fit one's prior beliefs. Third, the book explores the economic implications of the conventional association of risk-taking with masculinity and risk-aversion with femininity. Not only fairness in employment, but also the health of the financial sector and national responses to climate change, this book argues, are being compromised. This volume will be eye-opening for anyone interested in gender, decision-making, cognition, and/or risk, especially in areas relating to employment, finance, management, or public policy.

Education for sustainable development (ESD) presents an intriguing challenge in developed countries. The very notion of sustainable development may appear to be at cross-purposes with the social and political aims of large industrial economies. Yet, arguably, the residents of wealthy countries may be most in need of new ways of thinking and behaving on an increasingly more fragile and crowded planet. This book presents a collection of essays that capture the depth and diversity of education for sustainable development (ESD) work in formal education in Canada and the

United States. Many of the authors are pioneers in the field of ESD, not only in their own countries but internationally. In this book, they share their expertise, lessons learned, and insights into the ongoing success of their work. The essays reflect leading edge practice, innovation, and depth of experience and provide clear models and strategies for expanding the application and influence of ESD in wealthy countries. The ESD programs described in the book are relevant and culturally appropriate for the specific locally contexts in which they are found but also in the larger context of ESD writ large as a planetary endeavour.

Winner of the Booker prize and twice winner of the Booker of Bookers, *Midnight's Children* is "one of the most important books to come out of the English-speaking world in this generation" (New York Review of Books). Reissued for the 40th anniversary of the original publication--with a new introduction from the author--Salman Rushdie's widely acclaimed novel is a masterpiece in literature. Saleem Sinai is born at the stroke of midnight on August 15, 1947, the very moment of India's independence. Greeted by fireworks displays, cheering crowds, and Prime Minister Nehru himself, Saleem grows up to learn the ominous consequences of this coincidence. His every act is mirrored and magnified in events that sway the course of national affairs; his health and well-being are inextricably bound to those of his nation; his life is inseparable, at times indistinguishable, from the history of his country. Perhaps most remarkable are the telepathic powers linking him with India's 1,000 other "midnight's children," all born in that initial hour and endowed with magical gifts. This novel is at once a fascinating family saga and an astonishing evocation of a vast land and its people--a brilliant incarnation of the universal human comedy. *Midnight's Children* stands apart as both an epochal work of fiction and a brilliant performance by one of the great literary voices of our time.

This book examines the economics and related impacts of unconventional shale gas development. While focusing on the Marcellus and Utica Shales in the Mid-Atlantic region, additional insights from other regions are included to provide a broader view of these issues. Shale gas development in recent years has changed the energy discussion in the US, as existing

reserves of natural gas coupled with horizontal drilling and hydraulic fracturing make exploitation of these reserves economically feasible. The importance of natural gas is seen as likely to continue to expand over the coming years, and is expected to increase even further with environmental considerations, such as greenhouse gas emissions. Horizontal drilling and hydraulic fracturing producing natural gas from deposits such as the Marcellus Shale is making the US a net producer of natural gas. Previous studies have examined the economic impact of exploration and production in the region. Other studies have addressed legal, environmental, biodiversity, and public health impacts of unconventional shale development. This is the first volume to focus solely on the economics and related financial impacts of this development. This book not only fills the research gap, but also provides information that policy makers and the public need to better understand this pressing issue.

We have always had land in which the agricultural productivity is limited because there is not enough moisture. Systems of farming and burning often degrade dryland further until it is desert. Today, however, the problem is becoming much more serious. Over 20 per cent of the world's population lives in dryland areas, and unless action is taken drylands will increase dramatically. This book focuses on the people who live and farm in the drylands, their use of land resources and the economic returns from their decisions. In a clear and thorough economic appraisal, the authors show how it is still possible to arrest the problem. Originally published in 1989

"This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be made in favour of investment in 3 major social determinants of health areas: education, social protection, and urban development and infrastructure. It describes whether education policy, social protection, and urban development, housing and transport policy can act as health policy"--

Unlike most of the recent literature on Schumpeter, which deals with his work from the standpoint of economics, Tom Bottomore's new study analyses Schumpeter as an economic sociologist or sociological economist. The book begins with an account of the intellectual and cultural milieu of Vienna in the years of Schumpeter's university studies and his early writings which was to provide the formative influences on his thought. Bottomore then examines critically his methodological views and the changes they underwent, both in relation to different philosophies of science and to the views of the Austrian school of economics and of Marxism, particularly the Austro-Marxists. The core of the book is devoted to studies of Schumpeter's major writings, discussed from the point of view of method, substantive content and argument. In conclusion, Bottomore assesses the nature and results of Schumpeter's economic sociology, comparing this to the work of Max Weber, some Marxist thinkers and other contributors to the field. He also sets out a new 'research programme' for economic sociology.

INTRODUCTION CHAPTER 1. ECOLOGICAL ECONOMICS AND COASTAL ZONE ECOSYSTEMS' VALUES: AN OVERVIEW. Turner, R. K. , Bateman, I. J. and Adger, W. N. 1. 1 Coastal zone pressure and sustainable management challenges Given the continued intensification of the process of globalisation - involving population growth, population density changes via urbanisation, industrial development, increased trade and capital flows, liberalisation of transnational corporation activity and lifestyle and attitudinal changes - coastal zones and their hydrologically linked catchment areas have come under heavy environmental pressure. The scale and extent of socio-economic activities have profound implications for the now coevolving natural and human systems and their complex interrelationships (Turner, Perrings and Folke, 1997). The consequences of this process of change manifest themselves across a range of spatial and temporal scales. Indeed the juxtaposition of different spatial, functional and temporal scales that is inherent in the catchment-coastal ecosystems-seas/oceans continuum poses particularly difficult challenges for both science and resource management/governance.
