An insider's view of the Reserve Bank of India Duvvuri Subbarao's term as the governor of the Reserve Bank of India from 2008 to 2013 was an unusually turbulent period. The global financial crisis erupted; India was in the throes of a decade-high, stubborn inflation rate, followed by a sharp depreciation of the rupee. This was also a time when questions about the breadth of the RBI's mandate, autonomy and accountability became subjects of debate in financial circles and in the media at large. Who Moved My Interest Rate is an authoritative account of the dilemmas and quandaries he confronted while leading the Reserve Bank through these extraordinary economic and political challenges.

What is the evidence that we are truly living in the last days described in the Bible? Even the disciples thought Jesus would return in their lifetime, and people for centuries have looked at this event or that event and thought the end days were upon them, so how are the world events of today different from those before? Is there something going on today that is unprecedented throughout human history? In *Signs and Seasons*, you'll discover an eye-opening and thought-provoking journey through the signs evident in our world today. What are the signs we should be watching for? Are the signs evidence of an event to happen immediately, or are they part of a bigger picture? Explore the signs from the past that were outlined in the Bible that have been fulfilled and what lies ahead for the human race. Discover how scientific and archeological finds actually help support the truth of scripture. Uncover what is not being told by the media and how world events relate to prophecy foretold long ago. What is the "season" that was foretold, and how do we recognize and prepare for it? Are the prophecies told centuries ago something to fear and avoid, or is there a real reason for hope in all the chaos and deception of today's world? *Signs and Seasons* will alter the way you view the world around us.

Temporal databases have been an active research topic for at least fifteen years. During this time, several dozen temporal query languages have been proposed. Many within the temporal database research community perceived that the time had come to consolidate approaches to temporal data models and calculus based query languages, to achieve a consensus query language and associated data model upon which future research can be based. While there were many query language proposals, with a diversity of language and modeling constructs, common themes kept resurfacing. However, the community was quite fragmented, with each research project being based on a particular and different set of assumptions and approaches. Often these assumptions were not germane to the research per se, but were made simply because the research required a data model or query language with certain characteristics, with the particular one chosen rather arbitrarily. It would be better in such circumstances for research projects to choose the same language. Unfortunately, no existing language had attracted a following large enough to become the one of choice. In April, 1992 Richard Snodgrass circulated a white paper that proposed that a temporal extension to SQL be produced by the research community. Shortly thereafter, the temporal database community organized the "ARPA/NSF International Workshop on an Infrastructure for Temporal Databases," which was held in Arlington, TX, in June, 1993.
