The revolutionary effects of using accounting information systems by displacing manual information systems in the private and public sectors cannot be overstated. The benefits of this substitution of set of processes include increased mathematical accuracy, predefined fields and coding tasks, and de-emphasis of manual clerical labor in favor of labor adept in data processing. Reporting can be significantly automated, facilitating managerial power and control at a distance and the proliferation of global enterprises. The potential detriments are rarely accurately, completely, and timely addressed as information system vendors, management consultants, and corporate procurement teams race toward the popularly conceived state of the art.

Systems are ballyhooed as continually improving in processing speed, functionality, and capacity. Users of these automated systems may not consider big picture effects, and they may not intelligently consider the conduct risks to their own enterprises by concentrating such global reach and influence at high levels of senior management without dedicating adequate resources to verifying the accuracy, completeness, and timeliness of the information systems. This book considers these risks.

Simple enough for beginners but challenging enough for advanced students, this is a lively and entertaining brush-up, introductory text, or classroom supplement.

Accounting Information Systems Thomson South-Western

This book contains a collection of research papers on accounting information systems including their strategic role in decision processes, within and between companies. An accounting system is a complex system composed of a mix of strictly interrelated elements such as data, information, human resources, IT tool, accounting models and procedures. Accounting information systems are often considered the instrument by default for accounting automation. This book aims to sketch a clear picture of the current state of AIS research, including design, acceptance and reliance, value-added decision making, interorganizational links, and process improvements. The contributions in this volume emphasize that AIS has grown into a powerful strategic tool.

The book provides evidence for

this observation by examining a wide range of current issues ranging from theory development in AIS to practical applications of accounting information systems. In particular it focuses on themes of growing interest in the realm of XBRL and Financial Reporting, Management Information Systems, IT/IS Audit and IT/IS Compliance. The book will be of interest to financial and managerial accountants and IT/IS practitioners, including information systems managers and consultants.
