This tool is used to create a standard documentation of Java code in HTML file format. In fact, Java officially uses this tool to create its own library API documentation. To make Java code documentation ready, one must adhere to certain norms while writing the code so that the javadoc tool is able of run through the java file and create the API documentation.

[API Documentation](#)

To create the API documentation, the captains of Java ran a program called javadoc. The javadoc program took lines like these right out of the `PrintStream.java` file and used the lines to make the documentation that you see in your web browser. Other Java programmers do the same thing.
